### Compliance 'FAILED'

### Compliance 'SKIPPED'

### Compliance 'PASSED'

### Compliance 'INFO', 'WARNING', 'ERROR'

### Hosts with Vulnerabilities Report

- Hosts with Vulnerabilities: Top 25 Vulnerabilities by Plugin..... 13
- Hosts with Vulnerabilities: Hosts by Plugin..... 15

### Vulnerabilities by Host

- 10.10.10.10..... 18

### Vulnerabilities by Host

- 10.10.10.10..... 25

### Remediations

- Suggested Remediations..... 191

### Exploitable Vulnerabilities Report

- Exploitable Vulnerabilities: Top 25..... 193
- Exploitable Vulnerabilities: Hosts by Plugin..... 194

### Overview

- Vulnerability Instances: all and exploitable, by severity..... 196

### Top 10 Critical Vulnerabilities

- No Results:..... 198
- Top 10 Critical Vulnerabilities: (CVSS v3.0)..... 199

### Top 10 High Vulnerabilities

• No Results:.....	201
• Top 10 High Vulnerabilities: (CVSS v3.0).....	202

## **Top 10 Most Prevalent Vulnerabilities**

• Top 10 Most Prevalent Vulnerabilities: (VPR).....	204
• Top 10 Most Prevalent Vulnerabilities: (CVSS v3.0).....	205

## **Default/Known Accounts Report**

• No Results:.....	207
--------------------	-----

## **Unsupported Software Report**

• Unsupported Software: Top 25.....	209
• Unsupported Software: Hosts by Plugin.....	210

## **OS Detections Report**

• OS Detections: Counts by Confidence Level.....	212
• OS Detections: Max Severity by OS Family (Confidence > 50).....	213
• OS Detections: Details (Confidence > 50).....	214

## **Vulnerabilities by Plugin**

• 20007 (2) - SSL Version 2 and 3 Protocol Detection.....	216
• 32321 (2) - Debian OpenSSH/OpenSSL Package Random Number Generator Weakness (SSL check).....	219
• 11356 (1) - NFS Exported Share Information Disclosure.....	221
• 32314 (1) - Debian OpenSSH/OpenSSL Package Random Number Generator Weakness.....	223
• 33850 (1) - Unix Operating System Unsupported Version Detection.....	225
• 51988 (1) - Bind Shell Backdoor Detection.....	226
• 61708 (1) - VNC Server 'password' Password.....	227
• 42873 (2) - SSL Medium Strength Cipher Suites Supported (SWEET32).....	228
• 10205 (1) - rlogin Service Detection.....	230
• 10245 (1) - rsh Service Detection.....	231
• 42256 (1) - NFS Shares World Readable.....	232
• 90509 (1) - Samba Badlock Vulnerability.....	233

• 136769 (1) - ISC BIND Service Downgrade / Reflected DoS.....	235
• 15901 (2) - SSL Certificate Expiry.....	237
• 45411 (2) - SSL Certificate with Wrong Hostname.....	239
• 51192 (2) - SSL Certificate Cannot Be Trusted.....	241
• 57582 (2) - SSL Self-Signed Certificate.....	243
• 65821 (2) - SSL RC4 Cipher Suites Supported (Bar Mitzvah).....	245
• 104743 (2) - TLS Version 1.0 Protocol Detection.....	248
• 11213 (1) - HTTP TRACE / TRACK Methods Allowed.....	250
• 12217 (1) - DNS Server Cache Snooping Remote Information Disclosure.....	253
• 26928 (1) - SSL Weak Cipher Suites Supported.....	255
• 31705 (1) - SSL Anonymous Cipher Suites Supported.....	257
• 33447 (1) - Multiple Vendor DNS Query ID Field Prediction Cache Poisoning.....	259
• 42263 (1) - Unencrypted Telnet Server.....	261
• 52611 (1) - SMTP Service STARTTLS Plaintext Command Injection.....	263
• 57608 (1) - SMB Signing not required.....	265
• 81606 (1) - SSL/TLS EXPORT_RSA <= 512-bit Cipher Suites Supported (FREAK).....	267
• 89058 (1) - SSL DROWN Attack Vulnerability (Decrypting RSA with Obsolete and Weakened eNcryption).....	269
• 90317 (1) - SSH Weak Algorithms Supported.....	271
• 136808 (1) - ISC BIND Denial of Service.....	272
• 139915 (1) - ISC BIND 9.x < 9.11.22, 9.12.x < 9.16.6, 9.17.x < 9.17.4 DoS.....	274
• 78479 (2) - SSLv3 Padding Oracle On Downgraded Legacy Encryption Vulnerability (POODLE).....	276
• 10114 (1) - ICMP Timestamp Request Remote Date Disclosure.....	278
• 10407 (1) - X Server Detection.....	279
• 70658 (1) - SSH Server CBC Mode Ciphers Enabled.....	280
• 71049 (1) - SSH Weak MAC Algorithms Enabled.....	282
• 83738 (1) - SSL/TLS EXPORT_DHE <= 512-bit Export Cipher Suites Supported (Logjam).....	283
• 83875 (1) - SSL/TLS Diffie-Hellman Modulus <= 1024 Bits (Logjam).....	285
• 153953 (1) - SSH Weak Key Exchange Algorithms Enabled.....	287
• 11219 (25) - Nessus SYN scanner.....	289

• 11111 (10) - RPC Services Enumeration.....	292
• 22964 (8) - Service Detection.....	295
• 10092 (2) - FTP Server Detection.....	297
• 10863 (2) - SSL Certificate Information.....	298
• 11002 (2) - DNS Server Detection.....	301
• 11011 (2) - Microsoft Windows SMB Service Detection.....	302
• 11154 (2) - Unknown Service Detection: Banner Retrieval.....	303
• 21643 (2) - SSL Cipher Suites Supported.....	305
• 22227 (2) - RMI Registry Detection.....	307
• 45410 (2) - SSL Certificate 'commonName' Mismatch.....	308
• 50845 (2) - OpenSSL Detection.....	309
• 56984 (2) - SSL / TLS Versions Supported.....	310
• 57041 (2) - SSL Perfect Forward Secrecy Cipher Suites Supported.....	311
• 62563 (2) - SSL Compression Methods Supported.....	313
• 70544 (2) - SSL Cipher Block Chaining Cipher Suites Supported.....	314
• 156899 (2) - SSL/TLS Recommended Cipher Suites.....	316
• 10028 (1) - DNS Server BIND version Directive Remote Version Detection.....	319
• 10107 (1) - HTTP Server Type and Version.....	320
• 10150 (1) - Windows NetBIOS / SMB Remote Host Information Disclosure.....	321
• 10223 (1) - RPC portmapper Service Detection.....	322
• 10263 (1) - SMTP Server Detection.....	323
• 10267 (1) - SSH Server Type and Version Information.....	324
• 10281 (1) - Telnet Server Detection.....	325
• 10287 (1) - Traceroute Information.....	326
• 10342 (1) - VNC Software Detection.....	327
• 10397 (1) - Microsoft Windows SMB LanMan Pipe Server Listing Disclosure.....	328
• 10437 (1) - NFS Share Export List.....	329
• 10719 (1) - MySQL Server Detection.....	330
• 10785 (1) - Microsoft Windows SMB NativeLanManager Remote System Information Disclosure.....	331

• 10881 (1) - SSH Protocol Versions Supported.....	332
• 11153 (1) - Service Detection (HELP Request).....	333
• 11156 (1) - IRC Daemon Version Detection.....	334
• 11424 (1) - WebDAV Detection.....	335
• 11819 (1) - TFTP Daemon Detection.....	336
• 11936 (1) - OS Identification.....	337
• 17975 (1) - Service Detection (GET request).....	339
• 18261 (1) - Apache Banner Linux Distribution Disclosure.....	340
• 19288 (1) - VNC Server Security Type Detection.....	341
• 19506 (1) - Nessus Scan Information.....	342
• 24260 (1) - HyperText Transfer Protocol (HTTP) Information.....	344
• 25220 (1) - TCP/IP Timestamps Supported.....	346
• 25240 (1) - Samba Server Detection.....	347
• 26024 (1) - PostgreSQL Server Detection.....	348
• 35371 (1) - DNS Server hostname.bind Map Hostname Disclosure.....	349
• 35373 (1) - DNS Server DNSSEC Aware Resolver.....	350
• 35716 (1) - Ethernet Card Manufacturer Detection.....	351
• 39519 (1) - Backported Security Patch Detection (FTP).....	352
• 39520 (1) - Backported Security Patch Detection (SSH).....	353
• 39521 (1) - Backported Security Patch Detection (WWW).....	354
• 42088 (1) - SMTP Service STARTTLS Command Support.....	355
• 45590 (1) - Common Platform Enumeration (CPE).....	357
• 48204 (1) - Apache HTTP Server Version.....	359
• 48243 (1) - PHP Version Detection.....	360
• 51891 (1) - SSL Session Resume Supported.....	361
• 52703 (1) - vsftpd Detection.....	362
• 53335 (1) - RPC portmapper (TCP).....	363
• 54615 (1) - Device Type.....	364
• 65792 (1) - VNC Server Unencrypted Communication Detection.....	365

• 66334 (1) - Patch Report.....	366
• 70657 (1) - SSH Algorithms and Languages Supported.....	367
• 84574 (1) - Backported Security Patch Detection (PHP).....	369
• 86420 (1) - Ethernet MAC Addresses.....	370
• 96982 (1) - Server Message Block (SMB) Protocol Version 1 Enabled (uncredentialed check).....	371
• 100871 (1) - Microsoft Windows SMB Versions Supported (remote check).....	373
• 104887 (1) - Samba Version.....	374
• 106716 (1) - Microsoft Windows SMB2 and SMB3 Dialects Supported (remote check).....	375
• 110723 (1) - Target Credential Status by Authentication Protocol - No Credentials Provided.....	376
• 117886 (1) - OS Security Patch Assessment Not Available.....	378
• 118224 (1) - PostgreSQL STARTTLS Support.....	379
• 135860 (1) - WMI Not Available.....	381
• 149334 (1) - SSH Password Authentication Accepted.....	382
• 153588 (1) - SSH SHA-1 HMAC Algorithms Enabled.....	383
• 181418 (1) - OpenSSH Detection.....	384

## **Hosts with Vulnerabilities Report**

---

Any vulnerabilities create gaps in the network's integrity, which attackers can take advantage of to gain access to the network. Once inside the network, an attacker can perform malicious attacks, steal sensitive data, and cause significant damage to critical systems. This report provides a summary of the most prevalent vulnerabilities.

## Hosts with Vulnerabilities: Top 25 Vulnerabilities by Plugin

The Hosts with Vulnerabilities: Top 25 table organizes the most prevalent vulnerabilities detected. The data is sorted using the count, which is a representation of the affected hosts. While some plugins may be present more than one time on a single host, for the most part a plugin will only be present once on each host. This list of vulnerabilities exposes the organization to many different attack frameworks and script kiddie attacks. These vulnerabilities should be prioritized and the software removed or updated to a supported version as soon as possible.

Severity (CVSS v3.0)	Plugin ID	Plugin Name	Count
CRITICAL	20007	SSL Version 2 and 3 Protocol Detection	2
CRITICAL	32321	Debian OpenSSH/OpenSSL Package Random Number Generator Weakness (SSL check)	2
HIGH	42873	SSL Medium Strength Cipher Suites Supported (SWEET32)	2
MEDIUM	15901	SSL Certificate Expiry	2
MEDIUM	45411	SSL Certificate with Wrong Hostname	2
MEDIUM	51192	SSL Certificate Cannot Be Trusted	2
MEDIUM	57582	SSL Self-Signed Certificate	2
MEDIUM	65821	SSL RC4 Cipher Suites Supported (Bar Mitzvah)	2
MEDIUM	104743	TLS Version 1.0 Protocol Detection	2
LOW	78479	SSLv3 Padding Oracle On Downgraded Legacy Encryption Vulnerability (POODLE)	2
CRITICAL	11356	NFS Exported Share Information Disclosure	1
CRITICAL	32314	Debian OpenSSH/OpenSSL Package Random Number Generator Weakness	1
CRITICAL	33850	Unix Operating System Unsupported Version Detection	1
CRITICAL	51988	Bind Shell Backdoor Detection	1
CRITICAL	61708	VNC Server 'password' Password	1
HIGH	10205	rlogin Service Detection	1
HIGH	10245	rsh Service Detection	1

HIGH	42256	NFS Shares World Readable	1
HIGH	90509	Samba Badlock Vulnerability	1
HIGH	136769	ISC BIND Service Downgrade / Reflected DoS	1
MEDIUM	11213	HTTP TRACE / TRACK Methods Allowed	1
MEDIUM	12217	DNS Server Cache Snooping Remote Information Disclosure	1
MEDIUM	26928	SSL Weak Cipher Suites Supported	1
MEDIUM	31705	SSL Anonymous Cipher Suites Supported	1
MEDIUM	33447	Multiple Vendor DNS Query ID Field Prediction Cache Poisoning	1

## Hosts with Vulnerabilities: Hosts by Plugin

The Hosts with Vulnerabilities: Hosts by Plugin table provides the IT operations team with an action plan and the identified hosts for each vulnerability. IT managers are able to use this information in planning patch deployments and in working with the information security team in risk mitigation efforts. The table provides all detected vulnerabilities and sorts the scan results using severity, then plugin ID. The entries in the "Hosts" column are then sorted in ascending order.

Severity (CVSS v3.0)	Plugin ID	Plugin Name	Hosts
CRITICAL	20007	SSL Version 2 and 3 Protocol Detection	10.10.10.10
CRITICAL	32321	Debian OpenSSH/OpenSSL Package Random Number Generator Weakness (SSL check)	10.10.10.10
HIGH	42873	SSL Medium Strength Cipher Suites Supported (SWEET32)	10.10.10.10
MEDIUM	15901	SSL Certificate Expiry	10.10.10.10
MEDIUM	45411	SSL Certificate with Wrong Hostname	10.10.10.10
MEDIUM	51192	SSL Certificate Cannot Be Trusted	10.10.10.10
MEDIUM	57582	SSL Self-Signed Certificate	10.10.10.10
MEDIUM	65821	SSL RC4 Cipher Suites Supported (Bar Mitzvah)	10.10.10.10
MEDIUM	104743	TLS Version 1.0 Protocol Detection	10.10.10.10
LOW	78479	SSLv3 Padding Oracle On Downgraded Legacy Encryption Vulnerability (POODLE)	10.10.10.10
CRITICAL	11356	NFS Exported Share Information Disclosure	10.10.10.10
CRITICAL	32314	Debian OpenSSH/OpenSSL Package Random Number Generator Weakness	10.10.10.10

CRITICAL	33850	Unix Operating System Unsupported Version Detection	10.10.10.10
CRITICAL	51988	Bind Shell Backdoor Detection	10.10.10.10
CRITICAL	61708	VNC Server 'password' Password	10.10.10.10

OS: Linux Kernel 2.6 on Ubuntu 8.04 (hardy)

## Vulnerabilities

### 51988 - Bind Shell Backdoor Detection

## Synopsis

The remote host may have been compromised.

## Description

A shell is listening on the remote port without any authentication being required. An attacker may use it by connecting to the remote port and sending commands directly.

## Solution

Verify if the remote host has been compromised, and reinstall the system if necessary.

## Risk Factor

Critical

## CVSS v3.0 Base Score

## 32314 - Debian OpenSSH/OpenSSL Package Random Number Generator Weakness

## Synopsis

---

The remote SSH host keys are weak.

## Description

---

The remote SSH host key has been generated on a Debian or Ubuntu system which contains a bug in the random number generator of its OpenSSL library.

The problem is due to a Debian packager removing nearly all sources of entropy in the remote version of OpenSSL.

An attacker can easily obtain the private part of the remote key and use this to set up decipher the remote session or set up a man in the middle attack.

## See Also

---

<http://www.nessus.org/u?107f9bdc>

<http://www.nessus.org/u?f14f4224>

## Solution

---

Consider all cryptographic material generated on the remote host to be guessable. In particular, all SSH, SSL and OpenVPN key material should be re-generated.

## Risk Factor

---

Critical

## 20007 - SSL Version 2 and 3 Protocol Detection

### Synopsis

---

The remote service encrypts traffic using a protocol with known weaknesses.

### Description

---

The remote service accepts connections encrypted using SSL 2.0 and/or SSL 3.0. These versions of SSL are affected by several cryptographic flaws, including:

- An insecure padding scheme with CBC ciphers.
- Insecure session renegotiation and resumption schemes.

An attacker can exploit these flaws to conduct man-in-the-middle attacks or to decrypt communications between the affected service and clients.

Although SSL/TLS has a secure means for choosing the highest supported version of the protocol (so that these versions will be used only if the client or server support nothing better), many web browsers implement this in an unsafe way that allows an attacker to downgrade a connection (such as in POODLE). Therefore, it is recommended that these protocols be disabled entirely.

NIST has determined that SSL 3.0 is no longer acceptable for secure communications. As of the date of enforcement found in PCI DSS v3.1, any version of SSL will not meet the PCI SSC's definition of 'strong cryptography'.

## 33850 - Unix Operating System Unsupported Version Detection

### Synopsis

The operating system running on the remote host is no longer supported.

### Description

According to its self-reported version number, the Unix operating system running on the remote host is no longer supported.

Lack of support implies that no new security patches for the product will be released by the vendor. As a result, it is likely to contain security vulnerabilities.

### Solution

Upgrade to a version of the Unix operating system that is currently supported.

### Risk Factor

Critical

### CVSS v3.0 Base Score

## 61708 - VNC Server 'password' Password

## Synopsis

A VNC server running on the remote host is secured with a weak password.

## Description

The VNC server running on the remote host is secured with a weak password. Nessus was able to login using VNC authentication and a password of 'password'. A remote, unauthenticated attacker could exploit this to take control of the system.

## Solution

Secure the VNC service with a strong password.

## Risk Factor

tcp/5900/vnc

Nessus logged in using a password of "password".

## 136769 - ISC BIND Service Downgrade / Reflected DoS

### Synopsis

The remote name server is affected by Service Downgrade / Reflected DoS vulnerabilities.

### Description

According to its self-reported version, the instance of ISC BIND 9 running on the remote name server is affected by performance downgrade and Reflected DoS vulnerabilities. This is due to BIND DNS not sufficiently limiting the number fetches which may be performed while processing a referral response.

An unauthenticated, remote attacker can exploit this to cause degrade the service of the recursive server or to use the affected server as a reflector in a reflection attack.

### See Also

<https://kb.isc.org/docs/cve-2020-8616>

### Solution

Upgrade to the ISC BIND version referenced in the vendor advisory.

### Risk Factor

```

### 42873 - SSL Medium Strength Cipher Suites Supported (SWEET32)

Synopsis

The remote service supports the use of medium strength SSL ciphers.

Description

The remote host supports the use of SSL ciphers that offer medium strength encryption. Nessus regards medium strength as any encryption that uses key lengths at least 64 bits and less than 112 bits, or else that uses the 3DES encryption suite.

Note that it is considerably easier to circumvent medium strength encryption if the attacker is on the same physical network.

See Also

<https://www.openssl.org/blog/blog/2016/08/24/sweet32/>

<https://sweet32.info>

Solution

Reconfigure the affected application if possible to avoid use of medium strength ciphers.

## 90509 - Samba Badlock Vulnerability

### Synopsis

An SMB server running on the remote host is affected by the Badlock vulnerability.

### Description

The version of Samba, a CIFS/SMB server for Linux and Unix, running on the remote host is affected by a flaw, known as Badlock, that exists in the Security Account Manager (SAM) and Local Security Authority (Domain Policy) (LSAD) protocols due to improper authentication level negotiation over Remote Procedure Call (RPC) channels. A man-in-the-middle attacker who is able to intercept the traffic between a client and a server hosting a SAM database can exploit this flaw to force a downgrade of the authentication level, which allows the execution of arbitrary Samba network calls in the context of the intercepted user, such as viewing or modifying sensitive security data in the Active Directory (AD) database or disabling critical services.

### See Also

<http://badlock.org>

<https://www.samba.org/samba/security/CVE-2016-2118.html>

### Solution

Upgrade to Samba version 4.2.11 / 4.3.8 / 4.4.2 or later.

### Risk Factor

Medium

## 10205 - rlogin Service Detection

## Synopsis

The rlogin service is running on the remote host.

## Description

The rlogin service is running on the remote host. This service is vulnerable since data is passed between the rlogin client and server in cleartext. A man-in-the-middle attacker can exploit this to sniff logins and passwords. Also, it may allow poorly authenticated logins without passwords. If the host is vulnerable to TCP sequence number guessing (from any network) or IP spoofing (including ARP hijacking on a local network) then it may be possible to bypass authentication.

Finally, rlogin is an easy way to turn file-write access into full logins through the .rhosts or rhosts.equiv files.

## Solution

Comment out the 'login' line in /etc/inetd.conf and restart the inetd process. Alternatively, disable this service and use SSH instead.

**10245 - rsh Service Detection**

## Synopsis

The rsh service is running on the remote host.

## Description

The rsh service is running on the remote host. This service is vulnerable since data is passed between the rsh client and server in cleartext. A man-in-the-middle attacker can exploit this to sniff logins and passwords. Also, it may allow poorly authenticated logins without passwords. If the host is vulnerable to TCP sequence number guessing (from any network) or IP spoofing (including ARP hijacking on a local network) then it may be possible to bypass authentication.

Finally, rsh is an easy way to turn file-write access into full logins through the .rhosts or rhosts.equiv files.

## Solution

Comment out the 'rsh' line in /etc/inetd.conf and restart the inetd process. Alternatively, disable this service and use SSH instead.

**12217 - DNS Server Cache Snooping Remote Information Disclosure**

Synopsis

The remote DNS server is vulnerable to cache snooping attacks.

Description

The remote DNS server responds to queries for third-party domains that do not have the recursion bit set.

This may allow a remote attacker to determine which domains have recently been resolved via this name server, and therefore which hosts have been recently visited.

For instance, if an attacker was interested in whether your company utilizes the online services of a particular financial institution, they would be able to use this attack to build a statistical model regarding company usage of that financial institution. Of course, the attack can also be used to find B2B partners, web-surfing patterns, external mail servers, and more.

Note: If this is an internal DNS server not accessible to outside networks, attacks would be limited to the internal network. This may include employees, consultants and potentially users on a guest network or WiFi connection if supported.

## 139915 - ISC BIND 9.x < 9.11.22, 9.12.x < 9.16.6, 9.17.x < 9.17.4 DoS

### Synopsis

The remote name server is affected by a denial of service vulnerability.

### Description

According to its self-reported version number, the installation of ISC BIND running on the remote name server is version 9.x prior to 9.11.22, 9.12.x prior to 9.16.6 or 9.17.x prior to 9.17.4. It is, therefore, affected by a denial of service (DoS) vulnerability due to an assertion failure when attempting to verify a truncated response to a TSIG-signed request. An authenticated, remote attacker can exploit this issue by sending a truncated response to a TSIG-signed request to trigger an assertion failure, causing the server to exit.

Note that Nessus has not tested for this issue but has instead relied only on the application's self-reported version number.

## See Also

<https://kb.isc.org/docs/cve-2020-8622>

## Solution

Upgrade to BIND 9.11.22, 9.16.6, 9.17.4 or later.

## 136808 - ISC BIND Denial of Service

### Synopsis

The remote name server is affected by an assertion failure vulnerability.

### Description

A denial of service (DoS) vulnerability exists in ISC BIND versions 9.11.18 / 9.11.18-S1 / 9.12.4-P2 / 9.13 / 9.14.11 / 9.15 / 9.16.2 / 9.17 / 9.17.1 and earlier. An unauthenticated, remote attacker can exploit this issue, via a specially-crafted message, to cause the service to stop responding.

Note that Nessus has not tested for this issue but has instead relied only on the application's self-reported version number.

### See Also

<https://kb.isc.org/docs/cve-2020-8617>

### Solution

Upgrade to the patched release most closely related to your current version of BIND.

## 33447 - Multiple Vendor DNS Query ID Field Prediction Cache Poisoning

## Synopsis

---

The remote name resolver (or the server it uses upstream) is affected by a DNS cache poisoning vulnerability.

## Description

---

The remote DNS resolver does not use random ports when making queries to third-party DNS servers. An unauthenticated, remote attacker can exploit this to poison the remote DNS server, allowing the attacker to divert legitimate traffic to arbitrary sites.

The remote DNS server uses non-random ports for its DNS requests. An attacker may spoof DNS responses.

List of used ports :

+ DNS Server: 156.17.234.185  
|- Port: 49948  
|- Port: 49951

```
| - Port: 49952
| - Port: 49953
```

## 57608 - SMB Signing not required

### Synopsis

---

Signing is not required on the remote SMB server.

### Description

---

Signing is not required on the remote SMB server. An unauthenticated, remote attacker can exploit this to conduct man-in-the-middle attacks against the SMB server.

### See Also

---

<http://www.nessus.org/u?df39b8b3>

<http://technet.microsoft.com/en-us/library/cc731957.aspx>

<https://www.samba.org/samba/docs/current/man-html/smb.conf.5.html>

<http://www.nessus.org/u?a3cac4ea>

### Solution

---

Enforce message signing in the host's configuration. On Windows, this is found in the policy setting 'Microsoft network server: Digitally sign communications (always)'. On Samba, the setting is called 'server signing'. See the 'see also' links for further details.

### 52611 - SMTP Service STARTTLS Plaintext Command Injection

## Synopsis

The remote mail service allows plaintext command injection while negotiating an encrypted communications channel.

## Description

The remote SMTP service contains a software flaw in its STARTTLS implementation that could allow a remote, unauthenticated attacker to inject commands during the plaintext protocol phase that will be executed during the ciphertext protocol phase.

Successful exploitation could allow an attacker to steal a victim's email or associated SASL (Simple Authentication and Security Layer) credentials.

## 31705 - SSL Anonymous Cipher Suites Supported

## Synopsis

---

The remote service supports the use of anonymous SSL ciphers.

## Description

---

The remote host supports the use of anonymous SSL ciphers. While this enables an administrator to set up a service that encrypts traffic without having to generate and configure SSL certificates, it offers no way to verify the remote host's identity and renders the service vulnerable to a man-in-the-middle attack.

Note: This is considerably easier to exploit if the attacker is on the same physical network.

## See Also

---

<http://www.nessus.org/u?3a040ada>

## Solution

---

Reconfigure the affected application if possible to avoid use of weak ciphers.

tcp/25/smtp

The following is a list of SSL anonymous ciphers supported by the remote TCP server :

Low Strength Ciphers (<= 64-bit key)

Name	Code	KEX	Auth	Encryption	MAC
-----	-----	---	---	-----	---
EXP-ADH-DES-CBC-SHA SHA1 export	0x00, 0x19	DH (512)	None	DES-CBC (40)	
EXP-ADH-RC4-MD5 export	0x00, 0x17	DH (512)	None	RC4 (40)	MD5
ADH-DES-CBC-SHA SHA1	0x00, 0x1A	DH	None	DES-CBC (56)	

Medium Strength Ciphers (> 64-bit and < 112-bit key, or 3DES)

Name	Code	KEX	Auth	Encryption	MAC
------	------	-----	------	------------	-----

ADH-DES-CBC3-SHA SHA1	0x00, 0x1B	DH	None	3DES-CBC (168)	
High Strength Ciphers (>= 112-bit key)					
Name	Code	KEX	Auth	Encryption	MAC
ADH-AES128-SHA SHA1	0x00, 0x34	DH	None	AES-CBC (128)	
ADH-AES256-SHA SHA1	0x00, 0x3A	DH	None	AES-CBC (256)	
ADH-RC4-MD5	0x00, 0x18	DH	None	RC4 (128)	MD5

The fields above are :

```
{Tenable ciphername}
{Cipher ID code}
Kex={key exchange}
Auth={authentication}
Encrypt={symmetric encryption method}
MAC={message authentication code}
{export flag}
```

## 51192 - SSL Certificate Cannot Be Trusted

### Synopsis

The SSL certificate for this service cannot be trusted.

### Description

The server's X.509 certificate cannot be trusted. This situation can occur in three different ways, in which the chain of trust can be broken, as stated below :

- First, the top of the certificate chain sent by the server might not be descended from a known public certificate authority. This can occur either when the top of the chain is an unrecognized, self-signed certificate, or when intermediate certificates are missing that would connect the top of the certificate chain to a known public certificate authority.
- Second, the certificate chain may contain a certificate that is not valid at the time of the scan. This can occur either when the scan occurs before one of the certificate's 'notBefore' dates, or after one of the certificate's 'notAfter' dates.
- Third, the certificate chain may contain a signature that either didn't match the certificate's information or could not be verified. Bad signatures can be fixed by getting the certificate with the bad signature to be re-signed by its issuer. Signatures that could not be verified are the result of the certificate's issuer using a signing algorithm that Nessus either does not support or does not recognize.

If the remote host is a public host in production, any break in the chain makes it more difficult for users to verify the authenticity and identity of the web server. This could make it easier to carry out man-in-the-middle attacks against the remote host.

## 15901 - SSL Certificate Expiry

### Synopsis

The remote server's SSL certificate has already expired.

### Description

This plugin checks expiry dates of certificates associated with SSL- enabled services on the target and reports whether any have already expired.

### Solution

Purchase or generate a new SSL certificate to replace the existing one.

### Risk Factor

Medium

### CVSS v3.0 Base Score

5.3 (CVSS:3.0/AV:N/AC:L/PR:N/UI:N/S:U/C:N/I:L/A:N)

### CVSS v2.0 Base Score

**89058 - SSL DROWN Attack Vulnerability (Decrypting RSA with Obsolete and Weakened eNcryption)**

## Synopsis

The remote host may be affected by a vulnerability that allows a remote attacker to potentially decrypt captured TLS traffic.

## Description

The remote host supports SSLv2 and therefore may be affected by a vulnerability that allows a cross-protocol Bleichenbacher padding oracle attack known as DROWN (Decrypting RSA with Obsolete and Weakened eNcryption). This vulnerability exists due to a flaw in the Secure Sockets Layer Version 2 (SSLv2) implementation, and it allows captured TLS traffic to be decrypted. A man-in-the-middle attacker can exploit this to decrypt the TLS connection by utilizing previously captured traffic and weak cryptography along with a series of specially crafted connections to an SSLv2 server that uses the same private key.

## See Also

<https://drownattack.com/>

<https://drownattack.com/drown-attack-paper.pdf>

## Solution

Disable SSLv2 and export grade cryptography cipher suites. Ensure that private keys are not used anywhere with server software that supports SSLv2 connections.

## Risk Factor

Medium

## CVSS v3.0 Base Score

5.9 (CVSS:3.0/AV:N/AC:H/PR:N/UI:N/S:U/C:H/I:N/A:N)

## References

BID	83733
CVE	CVE-2016-0800
XREF	CERT:583776

## Plugin Information

Published: 2016/03/01, Modified: 2019/11/20

## Plugin Output

tcp/25/smtp

The remote host is affected by SSL DROWN and supports the following vulnerable cipher suites :

Low Strength Ciphers (<= 64-bit key)

Name	Code	KEX	Auth	Encryption	MAC
-----	-----	---	----	-----	----
EXP-RC2-CBC-MD5 export	0x04, 0x00, 0x80	RSA (512)	RSA	RC2-CBC (40)	MD5
EXP-RC4-MD5 export	0x02, 0x00, 0x80	RSA (512)	RSA	RC4 (40)	MD5

High Strength Ciphers (>= 112-bit key)

Name	Code	KEX	Auth	Encryption	MAC
-----	-----	---	----	-----	----
RC4-MD5	0x01, 0x00, 0x80	RSA	RSA	RC4 (128)	MD5

The fields above are :

```
{Tenable ciphername}  
{Cipher ID code}  
Kex={key exchange}  
Auth={authentication}  
Encrypt={symmetric encryption method}  
MAC={message authentication code}  
{export flag}
```

## 65821 - SSL RC4 Cipher Suites Supported (Bar Mitzvah)

## Synopsis

The remote service supports the use of the RC4 cipher.

## Description

The remote host supports the use of RC4 in one or more cipher suites.

The RC4 cipher is flawed in its generation of a pseudo-random stream of bytes so that a wide variety of small biases are introduced into the stream, decreasing its randomness.

If plaintext is repeatedly encrypted (e.g., HTTP cookies), and an attacker is able to obtain many (i.e., tens of millions) ciphertexts, the attacker may be able to derive the plaintext.

## 57582 - SSL Self-Signed Certificate

### Synopsis

The SSL certificate chain for this service ends in an unrecognized self-signed certificate.

### Description

The X.509 certificate chain for this service is not signed by a recognized certificate authority. If the remote host is a public host in production, this nullifies the use of SSL as anyone could establish a man-in-the-middle attack against the remote host.

Note that this plugin does not check for certificate chains that end in a certificate that is not self-signed, but is signed by an unrecognized certificate authority.

### Solution

Purchase or generate a proper SSL certificate for this service.

### Risk Factor

Medium

### CVSS v3.0 Base Score

6.5 (CVSS:3.0/AV:N/AC:L/PR:N/UI:N/S:U/C:L/I:L/A:N)

```

## 81606 - SSL/TLS EXPORT\_RSA <= 512-bit Cipher Suites Supported (FREAK)

## Synopsis

The remote host supports a set of weak ciphers.

## Description

The remote host supports EXPORT\_RSA cipher suites with keys less than or equal to 512 bits. An attacker can factor a 512-bit RSA modulus in a short amount of time.

A man-in-the middle attacker may be able to downgrade the session to use EXPORT\_RSA cipher suites (e.g. CVE-2015-0204). Thus, it is recommended to remove support for weak cipher suites.

{export flag}
```

## 104743 - TLS Version 1.0 Protocol Detection

### Synopsis

The remote service encrypts traffic using an older version of TLS.

### Description

The remote service accepts connections encrypted using TLS 1.0. TLS 1.0 has a number of cryptographic design flaws. Modern implementations of TLS 1.0 mitigate these problems, but newer versions of TLS like 1.2 and 1.3 are designed against these flaws and should be used whenever possible.

As of March 31, 2020, Endpoints that aren't enabled for TLS 1.2 and higher will no longer function properly with major web browsers and major vendors.

PCI DSS v3.2 requires that TLS 1.0 be disabled entirely by June 30, 2018, except for POS POI terminals (and the SSL/TLS termination points to which they connect) that can be verified as not being susceptible to any known exploits.

### See Also

<https://tools.ietf.org/html/draft-ietf-tls-oldversions-deprecate-00>

### Solution

Enable support for TLS 1.2 and 1.3, and disable support for TLS 1.0.

### 42263 - Unencrypted Telnet Server

Synopsis

The remote Telnet server transmits traffic in cleartext.

Description

The remote host is running a Telnet server over an unencrypted channel.

Using Telnet over an unencrypted channel is not recommended as logins, passwords, and commands are transferred in cleartext. This allows a remote, man-in-the-middle attacker to eavesdrop on a Telnet session to obtain credentials or other sensitive information and to modify traffic exchanged between a client and server.

SSH is preferred over Telnet since it protects credentials from eavesdropping and can tunnel additional data streams such as an X11 session.

Solution

Disable the Telnet service and use SSH instead.

tcp/23/telnet

It is possible to determine the exact time set on the remote host.

The remote host answers to an ICMP timestamp request. This allows an attacker to know the date that is set on the targeted machine, which may assist an unauthenticated, remote attacker in defeating time-based authentication protocols.

Filter out the ICMP timestamp requests (13), and the outgoing ICMP timestamp replies (14).

### 70658 - SSH Server CBC Mode Ciphers Enabled

### Synopsis

The SSH server is configured to use Cipher Block Chaining.

### Description

The SSH server is configured to support Cipher Block Chaining (CBC) encryption. This may allow an attacker to recover the plaintext message from the ciphertext.

Note that this plugin only checks for the options of the SSH server and does not check for vulnerable software versions.

### Solution

Contact the vendor or consult product documentation to disable CBC mode cipher encryption, and enable CTR or GCM cipher mode encryption.

### Risk Factor

Low

**153953 - SSH Weak Key Exchange Algorithms Enabled**

## Synopsis

10.10.10.10

The remote SSH server is configured to allow weak key exchange algorithms.

#### Description

---

The remote SSH server is configured to allow key exchange algorithms which are considered weak.

This is based on the IETF draft document Key Exchange (KEX) Method Updates and Recommendations for Secure Shell (SSH) RFC9142. Section 4 lists guidance on key exchange algorithms that SHOULD NOT and MUST NOT be enabled. This includes:

diffie-hellman-group-exchange-sha1

diffie-hellman-group1-sha1

gss-gex-sha1-\*

gss-group1-sha1-\*

gss-group14-sha1-\*

rsa1024-sha1

Note that this plugin only checks for the options of the SSH server, and it does not check for vulnerable software versions.

#### See Also

---

<https://datatracker.ietf.org/doc/html/rfc9142>

#### Solution

---

Contact the vendor or consult product documentation to disable the weak algorithms.

tcp/22/ssh

The following client-to-server Message Authentication Code (MAC) algorithms are supported :

```
hmac-md5
hmac-md5-96
hmac-sha1-96
```

The following server-to-client Message Authentication Code (MAC) algorithms are supported :

```
hmac-md5
hmac-md5-96
```

**83875 - SSL/TLS Diffie-Hellman Modulus <= 1024 Bits (Logjam)****Synopsis**

The remote host allows SSL/TLS connections with one or more Diffie-Hellman moduli less than or equal to 1024 bits.

**Description**

The remote host allows SSL/TLS connections with one or more Diffie-Hellman moduli less than or equal to 1024 bits. Through cryptanalysis, a third party may be able to find the shared secret in a short amount of time (depending on modulus size and attacker resources). This may allow an attacker to recover the plaintext or potentially violate the integrity of connections.

**See Also**

<https://weakdh.org/>

**Solution**

Reconfigure the service to use a unique Diffie-Hellman moduli of 2048 bits or greater.

**Risk Factor**

Low

Vulnerable connection combinations :  
  
SSL/TLS version   : SSLv3  
Cipher suite      : TLS1_CK_DHE_RSA_EXPORT_WITH_DES40_CBC_SHA  
Diffie-Hellman MODP size (bits) : 512  
Logjam attack difficulty : Easy (could be carried out by individuals)  
  
SSL/TLS version   : TLSv1.0  
Cipher suite      : TLS1_CK_DHE_RSA_EXPORT_WITH_DES40_CBC_SHA  
Diffie-Hellman MODP size (bits) : 512  
Logjam attack difficulty : Easy (could be carried out by individuals)
```

### 83738 - SSL/TLS EXPORT\_DHE <= 512-bit Export Cipher Suites Supported (Logjam)

## Synopsis

---

The remote host supports a set of weak ciphers.

## Description

---

The remote host supports EXPORT\_DHE cipher suites with keys less than or equal to 512 bits. Through cryptanalysis, a third party can find the shared secret in a short amount of time.

A man-in-the middle attacker may be able to downgrade the session to use EXPORT\_DHE cipher suites. Thus, it is recommended to remove support for weak cipher suites.

## See Also

---

<https://weakdh.org/>

## Solution

---

Reconfigure the service to remove support for EXPORT\_DHE cipher suites.

## Risk Factor

Low

{Cipher ID code}

```
Kex={key exchange}
Auth={authentication}
Encrypt={symmetric encryption method}
MAC={message authentication code}
{export flag}
```

## 78479 - SSLv3 Padding Oracle On Downgraded Legacy Encryption Vulnerability (POODLE)

### Synopsis

---

It is possible to obtain sensitive information from the remote host with SSL/TLS-enabled services.

### Description

---

The remote host is affected by a man-in-the-middle (MitM) information disclosure vulnerability known as POODLE. The vulnerability is due to the way SSL 3.0 handles padding bytes when decrypting messages encrypted using block ciphers in cipher block chaining (CBC) mode.

MitM attackers can decrypt a selected byte of a cipher text in as few as 256 tries if they are able to force a victim application to repeatedly send the same data over newly created SSL 3.0 connections.

As long as a client and service both support SSLv3, a connection can be 'rolled back' to SSLv3, even if TLSv1 or newer is supported by the client and service.

The TLS Fallback SCSV mechanism prevents 'version rollback' attacks without impacting legacy clients; however, it can only protect connections when the client and service support the mechanism. Sites that cannot disable SSLv3 immediately should enable this mechanism.

This is a vulnerability in the SSLv3 specification, not in any particular SSL implementation. Disabling SSLv3 is the only way to completely mitigate the vulnerability.

### See Also

---

<https://www.imperialviolet.org/2014/10/14/poodle.html>

<https://www.openssl.org/~bodo/ssl-poodle.pdf>

<https://tools.ietf.org/html/draft-ietf-tls-downgrade-scsv-00>

### Solution

---

Disable SSLv3.

Services that must support SSLv3 should enable the TLS Fallback SCSV mechanism until SSLv3 can be disabled.

### Risk Factor

---

Medium

### CVSS v3.0 Base Score

## 10407 - X Server Detection

## Synopsis

An X11 server is listening on the remote host

## Description

The remote host is running an X11 server. X11 is a client-server protocol that can be used to display graphical applications running on a given host on a remote client.

Since the X11 traffic is not ciphered, it is possible for an attacker to eavesdrop on the connection.

## Solution

Restrict access to this port. If the X11 client/server facility is not used, disable TCP support in X11 entirely (-nolisten tcp).

## Risk Factor

Low

## CVSS v2.0 Base Score

2.6 (CVSS2#AV:N/AC:H/Au:N/C:P/I:N/A:N)

## 10028 - DNS Server BIND version Directive Remote Version Detection

## Synopsis

It is possible to obtain the version number of the remote DNS server.

## Description

The remote host is running BIND or another DNS server that reports its version number when it receives a special request for the text 'version.bind' in the domain 'chaos'.

This version is not necessarily accurate and could even be forged, as some DNS servers send the information based on a configuration file.

## Solution

It is possible to hide the version number of BIND by using the 'version' directive in the 'options' section in named.conf.

## Risk Factor

None

### 10092 - FTP Server Detection

#### Synopsis

An FTP server is listening on a remote port.

#### Description

It is possible to obtain the banner of the remote FTP server by connecting to a remote port.

#### Solution

n/a

#### Risk Factor

None

#### References

XREF	IAVT:0001-T-0030
XREF	IAVT:0001-T-0943

#### Plugin Information

Published: 1999/10/12, Modified: 2023/08/17

#### Plugin Output

tcp/21/ftp

```
The remote FTP banner is :  
  
220 (vsFTPD 2.3.4)
```

### 10092 - FTP Server Detection

#### Synopsis

An FTP server is listening on a remote port.

10.10.10.10

## Description

It is possible to obtain the banner of the remote FTP server by connecting to a remote port.

## Solution

n/a

## Risk Factor

None

## References

XREF IAVT:0001-T-0030

XREF IAVT:0001-T-0943

## Plugin Information

Published: 1999/10/12, Modified: 2023/08/17

## Plugin Output

tcp/2121/ftp

```
The remote FTP banner is :
```

```
220 ProFTPD 1.3.1 Server (Debian) [::ffff:10.10.10.10]
```

## 10107 - HTTP Server Type and Version

## Synopsis

A web server is running on the remote host.

## Description

This plugin attempts to determine the type and the version of the remote web server.

## Solution

n/a

## Risk Factor

None

## References

XREF IAVT:0001-T-0931

## Plugin Information

Published: 2000/01/04, Modified: 2020/10/30

## Plugin Output

tcp/80/www

```
The remote web server type is :  
Apache/2.2.8 (Ubuntu) DAV/2
```

## 24260 - HyperText Transfer Protocol (HTTP) Information

## Synopsis

Some information about the remote HTTP configuration can be extracted.

## Description

This test gives some information about the remote HTTP protocol - the version used, whether HTTP Keep-Alive is enabled, etc...

This test is informational only and does not denote any security problem.

## Solution

n/a

## Risk Factor

None

## Plugin Information

Published: 2007/01/30, Modified: 2024/02/26

## Plugin Output

tcp/80/www

```
Response Code : HTTP/1.1 200 OK  
Protocol version : HTTP/1.1  
HTTP/2 TLS Support: No
```

```
Date: Sat, 11 May 2024 18:55:59 GMT
Server: Apache/2.2.8 (Ubuntu) DAV/2
X-Powered-By: PHP/5.2.4-2ubuntu5.10
Content-Length: 891
Keep-Alive: timeout=15, max=100
Connection: Keep-Alive
Content-Type: text/html
```

```
The IRC server version is : Unreal3.2.8.1. FhIXOoE [*=2309]
```

### 10397 - Microsoft Windows SMB LanMan Pipe Server Listing Disclosure

#### Synopsis

It is possible to obtain network information.

#### Description

It was possible to obtain the browse list of the remote Windows system by sending a request to the LANMAN pipe. The browse list is the list of the nearest Windows systems of the remote host.

#### Solution

n/a

#### Risk Factor

None

#### Plugin Information

Published: 2000/05/09, Modified: 2022/02/01

#### Plugin Output

tcp/445/cifs

```
Here is the browse list of the remote host :  
  
METASPLOITABLE ( os : 0.0 )
```

### 10785 - Microsoft Windows SMB NativeLanManager Remote System Information Disclosure

#### Synopsis

10.10.10.10

It was possible to obtain information about the remote operating system.

#### Description

Nessus was able to obtain the remote operating system name and version (Windows and/or Samba) by sending an authentication request to port 139 or 445. Note that this plugin requires SMB to be enabled on the host.

#### Solution

n/a

#### Risk Factor

None

#### Plugin Information

Published: 2001/10/17, Modified: 2021/09/20

#### Plugin Output

tcp/445/cifs

```
The remote Operating System is : Unix  
The remote native LAN manager is : Samba 3.0.20-Debian  
The remote SMB Domain Name is : METASPLOITABLE
```

#### 11011 - Microsoft Windows SMB Service Detection

#### Synopsis

A file / print sharing service is listening on the remote host.

#### Description

The remote service understands the CIFS (Common Internet File System) or Server Message Block (SMB) protocol, used to provide shared access to files, printers, etc between nodes on a network.

#### Solution

n/a

#### Risk Factor

None

#### Plugin Information

Published: 2002/06/05, Modified: 2021/02/11

## Plugin Output

tcp/139/smb

```
An SMB server is running on this port.
```

## 11011 - Microsoft Windows SMB Service Detection

### Synopsis

A file / print sharing service is listening on the remote host.

### Description

The remote service understands the CIFS (Common Internet File System) or Server Message Block (SMB) protocol, used to provide shared access to files, printers, etc between nodes on a network.

### Solution

n/a

### Risk Factor

None

### Plugin Information

Published: 2002/06/05, Modified: 2021/02/11

## Plugin Output

tcp/445/cifs

```
A CIFS server is running on this port.
```

## 100871 - Microsoft Windows SMB Versions Supported (remote check)

### Synopsis

It was possible to obtain information about the version of SMB running on the remote host.

### Description

Nessus was able to obtain the version of SMB running on the remote host by sending an authentication request to port 139 or 445.

Note that this plugin is a remote check and does not work on agents.

#### Solution

n/a

#### Risk Factor

None

#### Plugin Information

Published: 2017/06/19, Modified: 2019/11/22

#### Plugin Output

tcp/445/cifs

```
The remote host supports the following versions of SMB :  
SMBv1
```

### 106716 - Microsoft Windows SMB2 and SMB3 Dialects Supported (remote check)

#### Synopsis

It was possible to obtain information about the dialects of SMB2 and SMB3 available on the remote host.

#### Description

Nessus was able to obtain the set of SMB2 and SMB3 dialects running on the remote host by sending an authentication request to port 139 or 445.

#### Solution

n/a

#### Risk Factor

None

#### Plugin Information

Published: 2018/02/09, Modified: 2020/03/11

#### Plugin Output

10.10.10.10

tcp/445/cifs

```
The remote host does NOT support the following SMB dialects :
_version_  _introduced in windows version_
2.0.2      Windows 2008
2.1        Windows 7
2.2.2      Windows 8 Beta
2.2.4      Windows 8 Beta
3.0        Windows 8
3.0.2      Windows 8.1
3.1        Windows 10
3.1.1      Windows 10
```

## 10719 - MySQL Server Detection

### Synopsis

A database server is listening on the remote port.

### Description

The remote host is running MySQL, an open source database server.

### Solution

n/a

### Risk Factor

None

### References

XREF IAVT:0001-T-0802

### Plugin Information

Published: 2001/08/13, Modified: 2022/10/12

### Plugin Output

tcp/3306/mysql

```
Version : 5.0.51a-3ubuntu5
Protocol : 10
Server Status : SERVER_STATUS_AUTOCOMMIT
Server Capabilities :
  CLIENT_LONG_FLAG (Get all column flags)
  CLIENT_CONNECT_WITH_DB (One can specify db on connect)
  CLIENT_COMPRESS (Can use compression protocol)
  CLIENT_PROTOCOL_41 (New 4.1 protocol)
```

```
CLIENT_SSL (Switch to SSL after handshake)
CLIENT_TRANSACTIONS (Client knows about transactions)
CLIENT_SECURE_CONNECTION (New 4.1 authentication)
```

## 10437 - NFS Share Export List

### Synopsis

The remote NFS server exports a list of shares.

### Description

This plugin retrieves the list of NFS exported shares.

### See Also

<http://www.tldp.org/HOWTO/NFS-HOWTO/security.html>

### Solution

Ensure each share is intended to be exported.

### Risk Factor

None

### Plugin Information

Published: 2000/06/07, Modified: 2019/10/04

### Plugin Output

tcp/2049/rpc-nfs

```
Here is the export list of 10.10.10.10 :
/ *
```

## 11219 - Nessus SYN scanner

### Synopsis

It is possible to determine which TCP ports are open.

### Description

This plugin is a SYN 'half-open' port scanner. It shall be reasonably quick even against a firewalled target.

Note that SYN scans are less intrusive than TCP (full connect) scans against broken services, but they might cause problems for less robust firewalls and also leave unclosed connections on the remote target, if the network is loaded.

#### Solution

Protect your target with an IP filter.

#### Risk Factor

None

#### Plugin Information

Published: 2009/02/04, Modified: 2024/03/19

#### Plugin Output

tcp/21/ftp

```
Port 21/tcp was found to be open
```

### 11219 - Nessus SYN scanner

## Synopsis

It is possible to determine which TCP ports are open.

## Description

This plugin is a SYN 'half-open' port scanner. It shall be reasonably quick even against a firewalled target.

Note that SYN scans are less intrusive than TCP (full connect) scans against broken services, but they might cause problems for less robust firewalls and also leave unclosed connections on the remote target, if the network is loaded.

#### Solution

Protect your target with an IP filter.

#### Risk Factor

None

#### Plugin Information

Published: 2009/02/04, Modified: 2024/03/19

#### Plugin Output

tcp/111/rpc-portmapper

```
Port 111/tcp was found to be open
```

### 19506 - Nessus Scan Information

#### Synopsis

---

This plugin displays information about the Nessus scan.

#### Description

---

This plugin displays, for each tested host, information about the scan itself :

- The version of the plugin set.
- The type of scanner (Nessus or Nessus Home).
- The version of the Nessus Engine.
- The port scanner(s) used.
- The port range scanned.
- The ping round trip time
- Whether credentialed or third-party patch management checks are possible.
- Whether the display of superseded patches is enabled
- The date of the scan.
- The duration of the scan.
- The number of hosts scanned in parallel.
- The number of checks done in parallel.

Scan Start Date : 2024/5/12 9:59 EDT
Scan duration : 594 sec
Scan for malware : no
```

## 11936 - OS Identification

## Synopsis

---

It is possible to guess the remote operating system.

## Description

Using a combination of remote probes (e.g., TCP/IP, SMB, HTTP, NTP, SNMP, etc.), it is possible to guess the name of the remote operating system in use. It is also possible sometimes to guess the version of the operating system.

## Solution

n/a

## Risk Factor

```

The remote host is running Linux Kernel 2.6 on Ubuntu 8.04 (gutsy)

## 117886 - OS Security Patch Assessment Not Available

## Synopsis

OS Security Patch Assessment is not available.

## Description

OS Security Patch Assessment is not available on the remote host.

This does not necessarily indicate a problem with the scan.

Credentials may not have been provided, OS security patch assessment may not be supported for the target, the target may not have been identified, or another issue may have occurred that prevented OS security patch assessment from being available. See plugin output for details.

This plugin reports non-failure information impacting the availability of OS Security Patch Assessment. Failure information is reported by plugin 21745 : 'OS Security Patch Assessment failed'. If a target host is not supported for OS Security Patch Assessment, plugin 110695 : 'OS Security Patch Assessment Checks Not Supported' will report concurrently with this plugin.

### 50845 - OpenSSL Detection

#### Synopsis

The remote service appears to use OpenSSL to encrypt traffic.

#### Description

Based on its response to a TLS request with a specially crafted server name extension, it seems that the remote service is using the OpenSSL library to encrypt traffic.

Note that this plugin can only detect OpenSSL implementations that have enabled support for TLS extensions (RFC 4366).

```

### 66334 - Patch Report

#### Synopsis

The remote host is missing several patches.

#### Description

The remote host is missing one or more security patches. This plugin lists the newest version of each patch to install to make sure the remote host is up-to-date.

Note: Because the 'Show missing patches that have been superseded' setting in your scan policy depends on this plugin, it will always run and cannot be disabled.

#### Solution

Install the patches listed below.

## 22227 - RMI Registry Detection

### Synopsis

An RMI registry is listening on the remote host.

### Description

The remote host is running an RMI registry, which acts as a bootstrap naming service for registering and retrieving remote objects with simple names in the Java Remote Method Invocation (RMI) system.

**10263 - SMTP Server Detection**

## Synopsis

An SMTP server is listening on the remote port.

## Description

The remote host is running a mail (SMTP) server on this port.

Since SMTP servers are the targets of spammers, it is recommended you disable it if you do not use it.

## Solution

Disable this service if you do not use it, or filter incoming traffic to this port.

## Risk Factor

None

**10881 - SSH Protocol Versions Supported**

## Synopsis

A SSH server is running on the remote host.

## Description

This plugin determines the versions of the SSH protocol supported by the remote SSH daemon.

## Solution

n/a

## Risk Factor

None

## Plugin Information

Published: 2002/03/06, Modified: 2021/01/19

## Plugin Output

tcp/22/ssh

The remote SSH daemon supports the following versions of the SSH protocol :

- 1.99
- 2.0

**153588 - SSH SHA-1 HMAC Algorithms Enabled**

## Synopsis

The remote SSH server is configured to enable SHA-1 HMAC algorithms.

## Description

The remote SSH server is configured to enable SHA-1 HMAC algorithms.

Although NIST has formally deprecated use of SHA-1 for digital signatures, SHA-1 is still considered secure for HMAC as the security of HMAC does not rely on the underlying hash function being resistant to collisions.

Note that this plugin only checks for the options of the remote SSH server.

## Solution

## 10863 - SSL Certificate Information

### Synopsis

This plugin displays the SSL certificate.

### Description

This plugin connects to every SSL-related port and attempts to extract and dump the X.509 certificate.

### Solution

n/a

### Risk Factor

None

### Plugin Information

Published: 2008/05/19, Modified: 2021/02/03

## Plugin Output

### tcp/5432/postgresql

## 70544 - SSL Cipher Block Chaining Cipher Suites Supported

### Synopsis

The remote service supports the use of SSL Cipher Block Chaining ciphers, which combine previous blocks with subsequent ones.

## Description

The remote host supports the use of SSL ciphers that operate in Cipher Block Chaining (CBC) mode. These cipher suites offer additional security over Electronic Codebook (ECB) mode, but have the potential to leak information if used improperly.

supported by the target :
```

```
DEFLATE (0x01)
```

### 57041 - SSL Perfect Forward Secrecy Cipher Suites Supported

#### Synopsis

The remote service supports the use of SSL Perfect Forward Secrecy ciphers, which maintain confidentiality even if the key is stolen.

#### Description

The remote host supports the use of SSL ciphers that offer Perfect Forward Secrecy (PFS) encryption. These cipher suites ensure that recorded SSL traffic cannot be broken at a future date if the server's private key is compromised.

## Plugin Output

tcp/25/smtp

Here is the list of SSL PFS ciphers supported by the remote server :

### Low Strength Ciphers (<= 64-bit key)

| Name                                   | Code       | KEX      | Auth | Encryption   | MAC |
|--|------------|----------|------|--------------|-----|
| -----                                  | -----      | ---      | ---- | -----        | --- |
| EXP-EDH-RSA-DES-CBC-SHA<br>SHA1 export | 0x00, 0x14 | DH (512) | RSA  | DES-CBC (40) |     |
| EDH-RSA-DES-CBC-SHA<br>SHA1            | 0x00, 0x15 | DH       | RSA  | DES-CBC (56) |     |

### Medium Strength Ciphers (> 64-bit and < 112-bit key, or 3DES)

| Name                         | Code       | KEX | Auth | Encryption     | MAC |
|------------------------------|------------|-----|------|----------------|-----|
| -----                        | -----      | --- | ---- | -----          | --- |
| EDH-RSA-DES-CBC3-SHA<br>SHA1 | 0x00, 0x16 | DH  | RSA  | 3DES-CBC (168) |     |

### High Strength Ciphers (>= 112-bit key)

| Name                       | Code       | KEX | Auth | Encryption    | MAC |
|----------------------------|------------|-----|------|---------------|-----|
| -----                      | -----      | --- | ---- | -----         | --- |
| DHE-RSA-AES128-SHA<br>SHA1 | 0x00, 0x33 | DH  | RSA  | AES-CBC (128) |     |
| DHE-RSA-AES256-SHA<br>SHA1 | 0x00, 0x39 | DH  | RSA  | AES-CBC (256) |     |

The fields above are :

```
{Tenable ciphername}
{Cipher ID code}
Kex={key exchange}
Auth={authentication}
Encrypt={symmetric encryption method}
MAC={message authentication code}
```

{export flag}

## 57041 - SSL Perfect Forward Secrecy Cipher Suites Supported

### Synopsis

The remote service supports the use of SSL Perfect Forward Secrecy ciphers, which maintain confidentiality even if the key is stolen.

### Description

The remote host supports the use of SSL ciphers that offer Perfect Forward Secrecy (PFS) encryption. These cipher suites ensure that recorded SSL traffic cannot be broken at a future date if the server's private key is compromised.

| EDH-RSA-DES-CBC3-SHA | 0x00, 0x16 | DH  | RSA  | 3DES-CBC (168) |     |

SHA1

High Strength Ciphers (>= 112-bit key)

| Name  | Code  | KEX | Auth | Encryption | MAC |
|-------|-------|-----|------|------------|-----|
| ----- | ----- | --- | ---  | -----      | --- |

|                            |            |    |     |              |
|----------------------------|------------|----|-----|--------------|
| DHE-RSA-AES128-SHA<br>SHA1 | 0x00, 0x33 | DH | RSA | AES-CBC(128) |
| DHE-RSA-AES256-SHA<br>SHA1 | 0x00, 0x39 | DH | RSA | AES-CBC(256) |

The fields above are :

```
{Tenable ciphertype}  
{Cipher ID code}  
Kex={key exchange}  
Auth={authentication}  
Encrypt={symmetric encryption method}  
MAC={message authentication code}  
{export flag}
```

## 51891 - SSL Session Resume Supported

### Synopsis

The remote host allows resuming SSL sessions.

### Description

This script detects whether a host allows resuming SSL sessions by performing a full SSL handshake to receive a session ID, and then reconnecting with the previously used session ID. If the server accepts the session ID in the second connection, the server maintains a cache of sessions that can be resumed.

### Solution

n/a

### Risk Factor

None

### Plugin Information

Published: 2011/02/07, Modified: 2021/09/13

### Plugin Output

tcp/25/smtp

```
This port supports resuming SSLv3 sessions.
```

## 156899 - SSL/TLS Recommended Cipher Suites

### Synopsis

The remote host advertises discouraged SSL/TLS ciphers.

Description

The remote host has open SSL/TLS ports which advertise discouraged cipher suites. It is recommended to only enable support for the following cipher suites:

TLSv1.3:

- 0x13,0x01 TLS13\_AES\_128\_GCM\_SHA256
- 0x13,0x02 TLS13\_AES\_256\_GCM\_SHA384
- 0x13,0x03 TLS13\_CHACHA20\_POLY1305\_SHA256

TLSv1.2:

- 0xC0,0x2B ECDHE-ECDSA-AES128-GCM-SHA256
- 0xC0,0x2F ECDHE-RSA-AES128-GCM-SHA256
- 0xC0,0x2C ECDHE-ECDSA-AES256-GCM-SHA384
- 0xC0,0x30 ECDHE-RSA-AES256-GCM-SHA384
- 0xCC,0xA9 ECDHE-ECDSA-CHACHA20-POLY1305
- 0xCC,0xA8 ECDHE-RSA-CHACHA20-POLY1305

This is the recommended configuration for the vast majority of services, as it is highly secure and compatible with nearly every client released in the last five (or more) years.

## 25240 - Samba Server Detection

### Synopsis

An SMB server is running on the remote host.

### Description

The remote host is running Samba, a CIFS/SMB server for Linux and Unix.

### See Also

<https://www.samba.org/>

### Solution

n/a

### Risk Factor

None

### Plugin Information

Published: 2007/05/16, Modified: 2022/10/12

### Plugin Output

tcp/445/cifs

## 104887 - Samba Version

### Synopsis

It was possible to obtain the samba version from the remote operating system.

### Description

Nessus was able to obtain the samba version from the remote operating by sending an authentication request to port 139 or 445. Note that this plugin requires SMB1 to be enabled on the host.

### Solution

n/a

## Risk Factor

None

## Plugin Information

Published: 2017/11/30, Modified: 2019/11/22

## Plugin Output

tcp/445/cifs

```
The remote Samba Version is : Samba 3.0.20-Debian
```

## 96982 - Server Message Block (SMB) Protocol Version 1 Enabled (uncredentialed check)

## Synopsis

The remote Windows host supports the SMBv1 protocol.

## Description

The remote Windows host supports Server Message Block Protocol version 1 (SMBv1). Microsoft recommends that users discontinue the use of SMBv1 due to the lack of security features that were included in later SMB versions. Additionally, the Shadow Brokers group reportedly has an exploit that affects SMB; however, it is unknown if the exploit affects SMBv1 or another version. In response to this, US-CERT recommends that users disable SMBv1 per SMB best practices to mitigate these potential issues.

## See Also

<https://blogs.technet.microsoft.com/filecab/2016/09/16/stop-using-smb1/>

<https://support.microsoft.com/en-us/help/2696547/how-to-detect-enable-and-disable-smbv1-smbv2-and-smbv3-in-windows-and>

<http://www.nessus.org/u?8dcab5e4>

<http://www.nessus.org/u?234f8ef8>

<http://www.nessus.org/u?4c7e0cf3>

## Solution

Disable SMBv1 according to the vendor instructions in Microsoft KB2696547. Additionally, block SMB directly by blocking TCP port 445 on all network boundary devices. For SMB over the NetBIOS API, block TCP ports 137 / 139 and UDP ports 137 / 138 on all network boundary devices.

## Risk Factor

None

### 110723 - Target Credential Status by Authentication Protocol - No Credentials Provided

## Synopsis

Nessus was able to find common ports used for local checks, however, no credentials were provided in the scan policy.

## Description

Nessus was not able to successfully authenticate directly to the remote target on an available authentication protocol. Nessus was able to connect to the remote port and identify that the service running on the port supports an authentication protocol, but Nessus failed to authenticate to the remote service using the provided credentials. There may have been a protocol failure that prevented authentication from being attempted or all of the provided credentials for the authentication protocol may be invalid. See plugin output for error details.

Please note the following :

- This plugin reports per protocol, so it is possible for valid credentials to be provided for one protocol and not another. For example, authentication may succeed via SSH but fail via SMB, while no credentials were provided for an available SNMP service.
- Providing valid credentials for all available authentication protocols may improve scan coverage, but the value of successful authentication for a given protocol may vary from target to target depending upon what data (if any) is gathered from the target via that protocol. For example, successful authentication via SSH is more valuable for Linux targets than for Windows targets, and likewise successful authentication via SMB is more valuable for Windows targets than for Linux targets.

#### Solution

### 10281 - Telnet Server Detection

#### Synopsis

A Telnet server is listening on the remote port.

#### Description

The remote host is running a Telnet server, a remote terminal server.

#### Solution

Disable this service if you do not use it.

| Risk Factor |

## 19288 - VNC Server Security Type Detection

## Synopsis

A VNC server is running on the remote host.

#### Description

This script checks the remote VNC server protocol version and the available 'security types'.

#### Solution

n/a

#### Risk Factor

None

#### Plugin Information

Published: 2005/07/22, Modified: 2021/07/13

#### Plugin Output

tcp/5900/vnc

```
\n\nThe remote VNC server chose security type #2 (VNC authentication)
```

### 65792 - VNC Server Unencrypted Communication Detection

#### Synopsis

A VNC server with one or more unencrypted 'security-types' is running on the remote host.

#### Description

This script checks the remote VNC server protocol version and the available 'security types' to determine if any unencrypted 'security-types' are in use or available.

#### Solution

n/a

#### Risk Factor

None

#### Plugin Information

Published: 2013/04/03, Modified: 2014/03/12

#### Plugin Output

tcp/5900/vnc

The remote VNC server supports the following security type which does not perform full data communication encryption :

2 (VNC authentication)

## 10342 - VNC Software Detection

### Synopsis

The remote host is running a remote display software (VNC).

### Description

The remote host is running VNC (Virtual Network Computing), which uses the RFB (Remote Framebuffer) protocol to provide remote access to graphical user interfaces and thus permits a console on the remote host to be displayed on another.

### See Also

<https://en.wikipedia.org/wiki/Vnc>

### Solution

Make sure use of this software is done in accordance with your organization's security policy and filter incoming traffic to this port.

### Risk Factor

None

### Plugin Information

Published: 2000/03/07, Modified: 2017/06/12

### Plugin Output

tcp/5900/vnc

The highest RFB protocol version supported by the server is :

3.3

## 135860 - WMI Not Available

### Synopsis

WMI queries could not be made against the remote host.

#### Description

WMI (Windows Management Instrumentation) is not available on the remote host over DCOM. WMI queries are used to gather information about the remote host, such as its current state, network interface configuration, etc.

Without this information Nessus may not be able to identify installed software or security vulnerabilities that exist on the remote host.

#### See Also

<https://docs.microsoft.com/en-us/windows/win32/wmisdk/wmi-start-page>

#### Solution

n/a

#### Risk Factor

None

#### Plugin Information

Published: 2020/04/21, Modified: 2024/05/06

#### Plugin Output

tcp/445/cifs

```
Can't connect to the 'root\CIMV2' WMI namespace.
```

### 11424 - WebDAV Detection

#### Synopsis

The remote server is running with WebDAV enabled.

#### Description

WebDAV is an industry standard extension to the HTTP specification.

It adds a capability for authorized users to remotely add and manage the content of a web server.

If you do not use this extension, you should disable it.

#### Solution

<http://support.microsoft.com/default.aspx?kbid=241520>

## Risk Factor

None

## Plugin Information

Published: 2003/03/20, Modified: 2011/03/14

## Plugin Output

tcp/80/www

**10150 - Windows NetBIOS / SMB Remote Host Information Disclosure**

## Synopsis

It was possible to obtain the network name of the remote host.

## Description

The remote host is listening on UDP port 137 or TCP port 445, and replies to NetBIOS nbtscan or SMB requests.

Note that this plugin gathers information to be used in other plugins, but does not itself generate a report.

## Solution

n/a

## Risk Factor

None

## Plugin Information

Published: 1999/10/12, Modified: 2021/02/10

## Plugin Output

udp/137/netbios-ns

The following 7 NetBIOS names have been gathered :

|                |                             |
|----------------|-----------------------------|
| METASPLOITABLE | = Computer name             |
| METASPLOITABLE | = Messenger Service         |
| METASPLOITABLE | = File Server Service       |
| __MSBROWSE__   | = Master Browser            |
| WORKGROUP      | = Workgroup / Domain name   |
| WORKGROUP      | = Master Browser            |
| WORKGROUP      | = Browser Service Elections |

This SMB server seems to be a Samba server - its MAC address is NULL.

## 52703 - vsftpd Detection

### Synopsis

An FTP server is listening on the remote port.

### Description

The remote host is running vsftpd, an FTP server for UNIX-like systems written in C.

### See Also

<http://vsftpd.beasts.org/>

### Solution

n/a

### Risk Factor

None

### Plugin Information

Published: 2011/03/17, Modified: 2019/11/22

### Plugin Output

tcp/21/ftp

```
Source   : 220 (vsFTPd 2.3.4)
Version  : 2.3.4
```

---

## Remediations

---

---

## Suggested Remediations

---

Taking the following actions across 1 hosts would resolve 7% of the vulnerabilities on the network.

| ACTION TO TAKE  | VULNS | HOSTS |
|---|-------|-------|
| ISC BIND 9.x < 9.11.22, 9.12.x < 9.16.6, 9.17.x < 9.17.4 DoS: Upgrade to BIND 9.11.22, 9.16.6, 9.17.4 or later. | 3     | 1     |
| Samba Badlock Vulnerability: Upgrade to Samba version 4.2.11 / 4.3.8 / 4.4.2 or later.                          | 0     | 1     |

---

## **Exploitable Vulnerabilities Report**

---

Exploitable vulnerabilities create gaps in the network's integrity, which attackers can take advantage of to gain access to the network. Once inside the network, an attacker can perform malicious attacks, steal sensitive data, and cause significant damage to critical systems. This report provides a summary of the most prevalent exploitable vulnerabilities.

## Exploitable Vulnerabilities: Top 25

The Exploitable Vulnerabilities: Top 25 table uses the plugin attribute "exploit\_available" to identify software that has working exploits in the wild. The data is then sorted using the count, which is a representation of the affected hosts. While some plugins may be present more than one time on a single host, for the most part a plugin will only be present once on each host. This list of vulnerabilities exposes the organization to many different attack frameworks and script kiddie attacks. These vulnerabilities should be prioritized and the software removed or updated to a supported version as soon as possible.

| Severity (CVSS v3.0) | Plugin ID | Plugin Name   | Count |
|----------------------|-----------|---|-------|
| CRITICAL             | 32321     | Debian OpenSSH/OpenSSL Package Random Number Generator Weakness (SSL check) | 2     |
| LOW                  | 78479     | SSLv3 Padding Oracle On Downgraded Legacy Encryption Vulnerability (POODLE) | 2     |
| CRITICAL             | 11356     | NFS Exported Share Information Disclosure                                   | 1     |
| CRITICAL             | 32314     | Debian OpenSSH/OpenSSL Package Random Number Generator Weakness             | 1     |
| HIGH                 | 10205     | rlogin Service Detection  | 1     |
| HIGH                 | 10245     | rsh Service Detection   | 1     |
| HIGH                 | 136769    | ISC BIND Service Downgrade / Reflected DoS                                  | 1     |
| MEDIUM               | 33447     | Multiple Vendor DNS Query ID Field Prediction Cache Poisoning               | 1     |
| MEDIUM               | 52611     | SMTP Service STARTTLS Plaintext Command Injection                           | 1     |
| MEDIUM               | 57608     | SMB Signing not required  | 1     |
| MEDIUM               | 136808    | ISC BIND Denial of Service  | 1     |

## Exploitable Vulnerabilities: Hosts by Plugin

The Exploitable Vulnerabilities: Hosts by Plugin table provides the IT operations team with an action plan and the identified hosts for each vulnerability. IT managers are able to use this information in planning patch deployments and in working with the information security team in risk mitigation efforts. The table also uses the plugin attribute "exploit\_available" to identify exploitable software and then sorts the scan results using severity, then plugin ID. The entries in the "Hosts" column are then sorted in ascending order.

| Severity (CVSS v3.0) | Plugin ID | Plugin Name   | Hosts       |
|----------------------|-----------|---|-------------|
| CRITICAL             | 32321     | Debian OpenSSH/OpenSSL Package Random Number Generator Weakness (SSL check) | 10.10.10.10 |
| LOW                  | 78479     | SSLv3 Padding Oracle On Downgraded Legacy Encryption Vulnerability (POODLE) | 10.10.10.10 |
| CRITICAL             | 11356     | NFS Exported Share Information Disclosure                                   | 10.10.10.10 |
| CRITICAL             | 32314     | Debian OpenSSH/OpenSSL Package Random Number Generator Weakness             | 10.10.10.10 |
| HIGH                 | 10205     | rlogin Service Detection  | 10.10.10.10 |
| HIGH                 | 10245     | rsh Service Detection   | 10.10.10.10 |
| HIGH                 | 136769    | ISC BIND Service Downgrade / Reflected DoS                                  | 10.10.10.10 |
| MEDIUM               | 33447     | Multiple Vendor DNS Query ID Field Prediction Cache Poisoning               | 10.10.10.10 |
| MEDIUM               | 52611     | SMTP Service STARTTLS Plaintext Command Injection                           | 10.10.10.10 |
| MEDIUM               | 57608     | SMB Signing not required  | 10.10.10.10 |
| MEDIUM               | 136808    | ISC BIND Denial of Service  | 10.10.10.10 |

---

## Overview

---

The Overview section contains two matrices that provide summary counts, by severity, using VPR or CVSS. Within each cell there is a number for the vulnerability count, and in parentheses the count of exploitable vulnerabilities. Also provided is the count based on severity level.

---

## Vulnerability Instances: all and exploitable, by severity

VPR: all(exploitable)

CVSS v3.0: all(exploitable)

---

## Top 10 Critical Vulnerabilities

---

The two tables in this chapter provide a top 10 vulnerabilities grouped using the critical VPR or critical CVSS. For VPR and CVSS v3.0 the rating is 9.0 - 10, for CVSS v2.0 the rating is 10. The vulnerabilities identified using VPR are the most active in the wild, and based on an in-depth threat analysis, are considered the most critical to mitigate. Traditionally, the method for identifying risk was most commonly with CVSS v3.0 or CVSS v2.0. While each still remain very important, and should be mitigated, these vulnerabilities are not given the same context as VPR identified vulnerabilities.

---

**No Results:**

No Top 10 Critical Vulnerabilities: (VPR) Found

---

## Top 10 High Vulnerabilities

---

The two tables in this chapter provide a top ' + limit + ' vulnerabilities grouped using the High VPR or High CVSS. For VPR and CVSS v3.0 the rating is 7.0 - 8.9, for CVSS v2.0 the rating is 7.0 - 9.9. The vulnerabilities identified using VPR are the most active in the wild and based on an in-depth threat analysis are considered the most critical to mitigate. Traditionally, the method for identifying risk was most commonly with CVSS v3.0 or CVSS v2.0. While each still remain very important, and should be mitigated, these vulnerabilities are not given the same context as VPR identified vulnerabilities.

## Top 10 Most Prevalent Vulnerabilities

---

The two tables in this chapter provide a top 10 vulnerabilities grouped using the Medium through Critical. For VPR, CVSS v3.0, and CVSS v2.0 the rating is 4.0 - 10. The vulnerabilities identified using VPR are the most active in the wild and based on an in-depth threat analysis are considered the most critical to mitigate. Traditionally, the method for identifying risk was most commonly with CVSS v3.0 or CVSS v2.0. While each still remain very important, and should be mitigated, these vulnerabilities are not given the same context as VPR identified vulnerabilities.

## Top 10 Most Prevalent Vulnerabilities: (VPR)

Top 10 most prevalent (medium, high, critical) vulnerabilities

| Plugin ID | Plugin Name   | Plugin Family         | VPR | Known Exploit? | Publication Date | Count |
|-----------|---|-----------------------|-----|----------------|------------------|-------|
| 32321     | Debian OpenSSH/OpenSSL Package Random Number Generator Weakness (SSL check) | Gain a shell remotely | 5.1 | Yes            | 2008/05/13       | 2     |
| 42873     | SSL Medium Strength Cipher Suites Supported (SWEET32)                       | General               | 5.1 | -              | 2016/08/24       | 2     |
| 78479     | SSLv3 Padding Oracle On Downgraded Legacy Encryption Vulnerability (POODLE) | General               | 5.1 | Yes            | 2014/10/14       | 2     |
| 65821     | SSL RC4 Cipher Suites Supported (Bar Mitzvah)                               | General               | 4.4 | -              | 2013/03/12       | 2     |
| 52611     | SMTP Service STARTTLS Plaintext Command Injection                           | SMTP problems         | 6.3 | Yes            | 2011/03/07       | 1     |

\* indicates the v3.0 score was not available; the v2.0 score is shown

---

## **Default/Known Accounts Report**

---

Default and/or known accounts create an easy entry point for attackers to take advantage of to gain access to the network and hosts. Once inside the network, an attacker can perform malicious attacks, steal sensitive data, and cause significant damage to critical systems. This report provides a summary of the most prevalent detections of default and known accounts.

---

**No Results:**

No Default/Known Accounts Found

---

For Trial Use Only

---

## **Unsupported Software Report**

---

The proliferation of unsupported and end-of-life (EOL) software is an issue for many organizations and increases the effort required to minimize risk. As software reaches end-of-life, vendors often stop providing updates and support for the older versions. This report provides system administrators with a summary of the software that is no longer supported and puts the organization at the most risk.

---

## Unsupported Software: Top 25

The Unsupported Software: Top 25 table uses the key word "unsupport" in the plugin name to identify software that is no longer supported by the vendors. The data is then sorted using the count, which is a representation of the affected hosts. While some plugins may be present more than one time on a single host, for the most part a plugin will only be present once on each host. This list of software is exposing the organization, as the software is no longer maintained by the vendor and therefore the risk cannot be mitigated. These vulnerabilities should be prioritized and the software removed or updated to a supported version as soon as possible.

| Severity<br>(CVSS v3.0) | Plugin<br>ID | Plugin Name   | Count |
|-------------------------|--------------|---|-------|
| CRITICAL                | 33850        | Unix Operating System Unsupported Version Detection | 1     |

---

## Unsupported Software: Hosts by Plugin

The Unsupported Software: Hosts by Plugin table provide the IT operations team with an action plan and the identified hosts for each vulnerability. IT managers are able to use this information in planning new software deployment plans and in working with the information security team in risk mitigation efforts. The table also uses the "unsupported" keyword and sorts the scan results by severity, then plugin ID. The entries in the "Hosts" column are then sorted in ascending order.

| Severity<br>(CVSS v3.0) | Plugin<br>ID | Plugin Name   | Hosts       |
|-------------------------|--------------|---|-------------|
| CRITICAL                | 33850        | Unix Operating System<br>Unsupported Version<br>Detection | 10.10.10.10 |

---

## **OS Detections Report**

---

System administrators and the security team work together to identify systems at the most risk. A good first step is to understand the operating systems in the network. This report provides a summary of the most prevalent operating systems on the network.

## OS Detections: Counts by Confidence Level

Nessus leverages several attributes such as "operating-system", "operating-system-unsupported", "os" and "operating-system-conf" to group the hosts into different OS families. In doing so this report organizes the system counts first using a matrix style table, that displays rows by the confidence level and then by an OS family using columns. The All column displays the total count of plugin present at the respective Confidence Level. The Windows, MacOS, and Linux, columns filter based on the key words "windows", "mac", or "linux". The Other column will match on anything that does match the aforementioned key words.

| Confidence | All | Windows | MacOS | Linux | Other |
|------------|-----|---------|-------|-------|-------|
| 0 - 9      | 0   | 0       | 0     | 0     | 0     |
| 10 - 19    | 0   | 0       | 0     | 0     | 0     |
| 20 - 29    | 0   | 0       | 0     | 0     | 0     |
| 30 - 39    | 0   | 0       | 0     | 0     | 0     |
| 40 - 49    | 0   | 0       | 0     | 0     | 0     |
| 50 - 59    | 0   | 0       | 0     | 0     | 0     |
| 60 - 69    | 0   | 0       | 0     | 0     | 0     |
| 70 - 79    | 0   | 0       | 0     | 0     | 0     |
| 80 - 89    | 0   | 0       | 0     | 0     | 0     |
| 90 - 100   | 1   | 0       | 0     | 1     | 0     |
| Totals     | 1   | 0       | 0     | 1     | 0     |

## OS Detections: Max Severity by OS Family (Confidence > 50)

Building upon the previous matrix, the OS Detections: Max Severity by OS Family (Confidence > 50) table provides the security team with summary view of risk based on operating system. The counts represented in this table are based on system count by OS family and if a vulnerability with the indicated severity is present. For example, in the Windows column and the High severity row, say there is a number 15. The number represents that there are 15 assets identified to have a Windows operating system with at least 1 high severity vulnerability.

| Severity (CVSS v3.0) | All | Windows | MacOS | Linux | Other |
|----------------------|-----|---------|-------|-------|-------|
| CRITICAL             | 1   | 0       | 0     | 1     | 0     |
| HIGH                 | 0   | 0       | 0     | 0     | 0     |
| MEDIUM               | 0   | 0       | 0     | 0     | 0     |
| LOW                  | 0   | 0       | 0     | 0     | 0     |
| INFO                 | 0   | 0       | 0     | 0     | 0     |
| Totals               | 1   | 0       | 0     | 1     | 0     |

---

## OS Detections: Details (Confidence > 50)

The OS Detections: Details (Confidence > 50) table presents all of the OS family detections, along with assets within each OS. The table also displays if the OS is supported by the vendor.

| OS                                      | Count | Unsupported | Hosts       |
|---|-------|-------------|-------------|
| Linux Kernel 2.6 on Ubuntu 8.04 (hardy) | 1     | yes         | 10.10.10.10 |

For Trial Use Only

## **Vulnerabilities by Plugin**

---

## 20007 (2) - SSL Version 2 and 3 Protocol Detection

### Synopsis

---

The remote service encrypts traffic using a protocol with known weaknesses.

### Description

---

The remote service accepts connections encrypted using SSL 2.0 and/or SSL 3.0. These versions of SSL are affected by several cryptographic flaws, including:

- An insecure padding scheme with CBC ciphers.
- Insecure session renegotiation and resumption schemes.

An attacker can exploit these flaws to conduct man-in-the-middle attacks or to decrypt communications between the affected service and clients.

Although SSL/TLS has a secure means for choosing the highest supported version of the protocol (so that these versions will be used only if the client or server support nothing better), many web browsers implement this in an unsafe way that allows an attacker to downgrade a connection (such as in POODLE). Therefore, it is recommended that these protocols be disabled entirely.

NIST has determined that SSL 3.0 is no longer acceptable for secure communications. As of the date of enforcement found in PCI DSS v3.1, any version of SSL will not meet the PCI SSC's definition of 'strong cryptography'.

<https://tools.ietf.org/html/rfc7568>

### Solution

---

Consult the application's documentation to disable SSL 2.0 and 3.0.

Use TLS 1.2 (with approved cipher suites) or higher instead.

### Risk Factor

---

Critical

## CVSS v3.0 Base Score

9.8 (CVSS:3.0/AV:N/AC:L/PR:N/UI:N/S:U/C:H/I:H/A:H)

## CVSS v2.0 Base Score

10.0 (CVSS2#AV:N/AC:L/Au:N/C/I:C/A:C)

## Plugin Information

Published: 2005/10/12, Modified: 2022/04/04

## Plugin Output

10.10.10.10 (tcp/25/smtp)

- SSLv2 is enabled and the server supports at least one cipher.

### Low Strength Ciphers (<= 64-bit key)

| Name                      | Code  | KEX       | Auth | Encryption   | MAC |
|---------------------------|-------|-----------|------|--------------|-----|
| -----                     | ----- | ---       | ---- | -----        | --- |
| EXP-RC2-CBC-MD5<br>export |       | RSA (512) | RSA  | RC2-CBC (40) | MD5 |
| EXP-RC4-MD5<br>export     |       | RSA (512) | RSA  | RC4 (40)     | MD5 |

### Medium Strength Ciphers (> 64-bit and < 112-bit key, or 3DES)

| Name         | Code  | KEX | Auth | Encryption     | MAC |
|--------------|-------|-----|------|----------------|-----|
| -----        | ----- | --- | ---- | -----          | --- |
| DES-CBC3-MD5 |       | RSA | RSA  | 3DES-CBC (168) | MD5 |

### High Strength Ciphers (>= 112-bit key)

| Name    | Code  | KEX | Auth | Encryption | MAC |
|---------|-------|-----|------|------------|-----|
| -----   | ----- | --- | ---- | -----      | --- |
| RC4-MD5 |       | RSA | RSA  | RC4 (128)  | MD5 |

The fields above are :

```
{Tenable ciphername}
{Cipher ID code}
Kex={key exchange}
Auth={authentication}
Encrypt={symmetric encryption method}
MAC={message authentication code}
{export flag}
```

- SSLv3 is enabled and the server supports at least one cipher.

Explanation: TLS 1.0 and SSL 3.0 cipher suites may be used with SSLv3

### Low Strength Ciphers (<= 64-bit key)

| Name                                   | Code  | KEX      | Auth | Encryption   | MAC |
|--|-------|----------|------|--------------|-----|
| -----                                  | ----- | ---      | ---- | -----        | --- |
| EXP-EDH-RSA-DES-CBC-SHA<br>SHA1 export |       | DH (512) | RSA  | DES-CBC (40) |     |
| EDH-RSA-DES-CBC-SHA                    |       | DH       | RSA  | DES-CBC (56) | SHA |
| [...]                                  |       |          |      |              |     |

## 10.10.10.10 (tcp/5432/postgresql)

- SSLv3 is enabled and the server supports at least one cipher.

Explanation: TLS 1.0 and SSL 3.0 cipher suites may be used with SSLv3

Medium Strength Ciphers (> 64-bit and < 112-bit key, or 3DES)

| Name                 | Code  | KEX | Auth | Encryption     | MAC |
|----------------------|-------|-----|------|----------------|-----|
| -----                | ----- | --- | ---  | -----          | --- |
| EDH-RSA-DES-CBC3-SHA |       | DH  | RSA  | 3DES-CBC (168) |     |
| SHA1                 |       |     |      |                |     |
| DES-CBC3-SHA         |       | RSA | RSA  | 3DES-CBC (168) |     |
| SHA1                 |       |     |      |                |     |

High Strength Ciphers (>= 112-bit key)

| Name               | Code  | KEX | Auth | Encryption    | MAC |
|--------------------|-------|-----|------|---------------|-----|
| -----              | ----- | --- | ---  | -----         | --- |
| DHE-RSA-AES128-SHA |       | DH  | RSA  | AES-CBC (128) |     |
| SHA1               |       |     |      |               |     |
| DHE-RSA-AES256-SHA |       | DH  | RSA  | AES-CBC (256) |     |
| SHA1               |       |     |      |               |     |
| AES128-SHA         |       | RSA | RSA  | AES-CBC (128) |     |

## 32321 (2) - Debian OpenSSH/OpenSSL Package Random Number Generator Weakness (SSL check)

### Synopsis

The remote SSL certificate uses a weak key.

### Description

The remote x509 certificate on the remote SSL server has been generated on a Debian or Ubuntu system which contains a bug in the random number generator of its OpenSSL library.

The problem is due to a Debian packager removing nearly all sources of entropy in the remote version of OpenSSL.

An attacker can easily obtain the private part of the remote key and use this to decipher the remote session or set up a man in the middle attack.

### See Also

<http://www.nessus.org/u?107f9bdc>

<http://www.nessus.org/u?f14f4224>

### Solution

Consider all cryptographic material generated on the remote host to be guessable. In particular, all SSH, SSL and OpenVPN key material should be re-generated.

### Risk Factor

Critical

### VPR Score

5.1

## 11356 (1) - NFS Exported Share Information Disclosure

### Synopsis

It is possible to access NFS shares on the remote host.

### Description

At least one of the NFS shares exported by the remote server could be mounted by the scanning host. An attacker may be able to leverage this to read (and possibly write) files on remote host.

### Solution

Configure NFS on the remote host so that only authorized hosts can mount its remote shares.

### Risk Factor

Critical

### VPR Score

5.9

### CVSS v2.0 Base Score

## 33850 (1) - Unix Operating System Unsupported Version Detection

### Synopsis

The operating system running on the remote host is no longer supported.

### Description

According to its self-reported version number, the Unix operating system running on the remote host is no longer supported.

Lack of support implies that no new security patches for the product will be released by the vendor. As a result, it is likely to contain security vulnerabilities.

### Solution

Upgrade to a version of the Unix operating system that is currently supported.

### Risk Factor

Critical

### CVSS v3.0 Base Score

10.0 (CVSS:3.0/AV:N/AC:L/PR:N/UI:N/S:C/C:H/I:H/A:H)

### Plugin Output

10.10.10.10 (tcp/1524/wild\_shell)

```
Nessus was able to execute the command "id" using the
following request :
```

```
This produced the following truncated output (limited to 10 lines) :
----- snip -----
root@metasploitable:/# uid=0(root) gid=0(root) groups=0(root)
root@metasploitable:/#
----- snip -----
```

## 61708 (1) - VNC Server 'password' Password

### Synopsis

A VNC server running on the remote host is secured with a weak password.

### Description

The VNC server running on the remote host is secured with a weak password. Nessus was able to login using VNC authentication and a password of 'password'. A remote, unauthenticated attacker could exploit this to take control of the system.

### Solution

Secure the VNC service with a strong password.

### Risk Factor

Critical

### CVSS v2.0 Base Score

10.0 (CVSS2#AV:N/AC:L/Au:N/C:C/I:C/A:C)

### Plugin Information

Published: 2012/08/29, Modified: 2015/09/24

### Plugin Output

10.10.10.10 (tcp/5900/vnc)

```
Nessus logged in using a password of "password".
```

## 42873 (2) - SSL Medium Strength Cipher Suites Supported (SWEET32)

### Synopsis

The remote service supports the use of medium strength SSL ciphers.

### Description

The remote host supports the use of SSL ciphers that offer medium strength encryption. Nessus regards medium strength as any encryption that uses key lengths at least 64 bits and less than 112 bits, or else that uses the 3DES encryption suite.

Note that it is considerably easier to circumvent medium strength encryption if the attacker is on the same physical network.

### See Also

<https://www.openssl.org/blog/blog/2016/08/24/sweet32/>

<https://sweet32.info>

### Solution

Reconfigure the affected application if possible to avoid use of medium strength ciphers.

### Risk Factor

Medium

### CVSS v3.0 Base Score

```

## 10205 (1) - rlogin Service Detection

### Synopsis

The rlogin service is running on the remote host.

### Description

The rlogin service is running on the remote host. This service is vulnerable since data is passed between the rlogin client and server in cleartext. A man-in-the-middle attacker can exploit this to sniff logins and passwords. Also, it may allow poorly authenticated logins without passwords. If the host is vulnerable to TCP sequence number guessing (from any network) or IP spoofing (including ARP hijacking on a local network) then it may be possible to bypass authentication.

Finally, rlogin is an easy way to turn file-write access into full logins through the .rhosts or rhosts.equiv files.

### Solution

Comment out the 'login' line in /etc/inetd.conf and restart the inetd process. Alternatively, disable this service and use SSH instead.

### Risk Factor

High

### VPR Score

5.9

10.10.10.10 (tcp/2049/rpc-nfs)

The following shares have no access restrictions :

/ \*

## 90509 (1) - Samba Badlock Vulnerability

### Synopsis

An SMB server running on the remote host is affected by the Badlock vulnerability.

### Description

The version of Samba, a CIFS/SMB server for Linux and Unix, running on the remote host is affected by a flaw, known as Badlock, that exists in the Security Account Manager (SAM) and Local Security Authority (Domain Policy) (LSAD) protocols due to improper authentication level negotiation over Remote Procedure Call (RPC) channels. A man-in-the-middle attacker who is able to intercept the traffic between a client and a server hosting a SAM database can exploit this flaw to force a downgrade of the authentication level, which allows the execution of arbitrary Samba network calls in the context of the intercepted user, such as viewing or modifying sensitive security data in the Active Directory (AD) database or disabling critical services.

### See Also

<http://badlock.org>

<https://www.samba.org/samba/security/CVE-2016-2118.html>

### Solution

Upgrade to Samba version 4.2.11 / 4.3.8 / 4.4.2 or later.

### Risk Factor

```

## 136769 (1) - ISC BIND Service Downgrade / Reflected DoS

### Synopsis

The remote name server is affected by Service Downgrade / Reflected DoS vulnerabilities.

### Description

According to its self-reported version, the instance of ISC BIND 9 running on the remote name server is affected by performance downgrade and Reflected DoS vulnerabilities. This is due to BIND DNS not sufficiently limiting the number fetches which may be performed while processing a referral response.

An unauthenticated, remote attacker can exploit this to cause degrade the service of the recursive server or to use the affected server as a reflector in a reflection attack.

### See Also

<https://kb.isc.org/docs/cve-2020-8616>

### Solution

Upgrade to the ISC BIND version referenced in the vendor advisory.

### Risk Factor

10.10.10.10
10.10.10.10
```

The Common Name in the certificate is :

ubuntu804-base.localdomain

## 51192 (2) - SSL Certificate Cannot Be Trusted

### Synopsis

The SSL certificate for this service cannot be trusted.

### Description

The server's X.509 certificate cannot be trusted. This situation can occur in three different ways, in which the chain of trust can be broken, as stated below :

- First, the top of the certificate chain sent by the server might not be descended from a known public certificate authority. This can occur either when the top of the chain is an unrecognized, self-signed certificate, or when intermediate certificates are missing that would connect the top of the certificate chain to a known public certificate authority.
- Second, the certificate chain may contain a certificate that is not valid at the time of the scan. This can occur either when the scan occurs before one of the certificate's 'notBefore' dates, or after one of the certificate's 'notAfter' dates.
- Third, the certificate chain may contain a signature that either didn't match the certificate's information or could not be verified. Bad signatures can be fixed by getting the certificate with the bad signature to be re-signed by its issuer. Signatures that could not be verified are the result of the certificate's issuer using a signing algorithm that Nessus either does not support or does not recognize.

If the remote host is a public host in production, any break in the chain makes it more difficult for users to verify the authenticity and identity of the web server. This could make it easier to carry out man-in-the-middle attacks against the remote host.

### 10.10.10.10 (tcp/25/smtp)

The following certificate was part of the certificate chain sent by the remote host, but it has expired :

```
| -Subject   : C=XX/ST=There is no such thing outside US/L=Everywhere/O=OCOSA/OU=Office for  
Complication of Otherwise Simple Affairs/CN=ubuntu804-base.localdomain/E=root@ubuntu804-  
base.localdomain  
| -Not After : Apr 16 14:07:45 2010 GMT
```

The following certificate was at the top of the certificate chain sent by the remote host, but it is signed by an unknown certificate authority :

```
| -Subject : C=XX/ST=There is no such thing outside US/L=Everywhere/O=OCOSA/OU=Office for  
Complication of Otherwise Simple Affairs/CN=ubuntu804-base.localdomain/E=root@ubuntu804-  
base.localdomain  
| -Issuer  : C=XX/ST=There is no such thing outside US/L=Everywhere/O=OCOSA/OU=Office for  
Complication of Otherwise Simple Affairs/CN=ubuntu804-base.localdomain/E=root@ubuntu804-  
base.localdomain
```

### 10.10.10.10 (tcp/5432/postgresql)

The following certificate was part of the certificate chain sent by the remote host, but it has expired :

```
| -Subject   : C=XX/ST=There is no such thing outside US/L=Everywhere/O=OCOSA/OU=Office for  
Complication of Otherwise Simple Affairs/CN=ubuntu804-base.localdomain/E=root@ubuntu804-  
base.localdomain  
| -Not After : Apr 16 14:07:45 2010 GMT
```

The following certificate was at the top of the certificate chain sent by the remote host, but it is signed by an unknown certificate authority :

```
| -Subject : C=XX/ST=There is no such thing outside US/L=Everywhere/O=OCOSA/OU=Office for  
Complication of Otherwise Simple Affairs/CN=ubuntu804-base.localdomain/E=root@ubuntu804-

Complication of Otherwise Simple Affairs/CN=ubuntu804-base.localdomain/E=root@ubuntu804-  
base.localdomain
```

## 57582 (2) - SSL Self-Signed Certificate

### Synopsis

The SSL certificate chain for this service ends in an unrecognized self-signed certificate.

### Description

The X.509 certificate chain for this service is not signed by a recognized certificate authority. If the remote host is a public host in production, this nullifies the use of SSL as anyone could establish a man-in-the-middle attack against the remote host.

Note that this plugin does not check for certificate chains that end in a certificate that is not self-signed, but is signed by an unrecognized certificate authority.

### Solution

Purchase or generate a proper SSL certificate for this service.

### Risk Factor

Medium

### CVSS v3.0 Base Score

6.5 (CVSS:3.0/AV:N/AC:L/PR:N/UI:N/S:U/C:L/I:L/A:N)

### CVSS v2.0 Base Score

### Plugin Information

Published: 2012/01/17, Modified: 2022/06/14

### Plugin Output

10.10.10.10 (tcp/25/smtp)

The following certificate was found at the top of the certificate chain sent by the remote host, but is self-signed and was not found in the list of known certificate authorities :

```
| -Subject : C=XX/ST=There is no such thing outside US/L=Everywhere/O=OCOSA/OU=Office for  
Complication of Otherwise Simple Affairs/CN=ubuntu804-base.localdomain/E=root@ubuntu804-  
base.localdomain
```

10.10.10.10 (tcp/5432/postgresql)

The following certificate was found at the top of the certificate chain sent by the remote host, but is self-signed and was not found in the list of known certificate authorities :

```
|-Subject : C=XX/ST=There is no such thing outside US/L=Everywhere/O=OCOSA/OU=Office for  
Complication of Otherwise Simple Affairs/CN=ubuntu804-base.localdomain/E=root@ubuntu804-  
base.localdomain
```

## 65821 (2) - SSL RC4 Cipher Suites Supported (Bar Mitzvah)

### Synopsis

The remote service supports the use of the RC4 cipher.

### Description

The remote host supports the use of RC4 in one or more cipher suites.

The RC4 cipher is flawed in its generation of a pseudo-random stream of bytes so that a wide variety of small biases are introduced into the stream, decreasing its randomness.

If plaintext is repeatedly encrypted (e.g., HTTP cookies), and an attacker is able to obtain many (i.e., tens of millions) ciphertexts, the attacker may be able to derive the plaintext.

[https://www.imperva.com/docs/HII\\_Attacking\\_SSL\\_when\\_using\\_RC4.pdf](https://www.imperva.com/docs/HII_Attacking_SSL_when_using_RC4.pdf)

### Solution

Reconfigure the affected application, if possible, to avoid use of RC4 ciphers. Consider using TLS 1.2 with AES-GCM suites subject to browser and web server support.

### Risk Factor

Medium

{export flag}
```

##### 10.10.10.10 (tcp/5432/postgresql)

List of RC4 cipher suites supported by the remote server :

#### High Strength Ciphers (>= 112-bit key)

| Name    | Code       | KEX | Auth | Encryption | MAC |
|---------|------------|-----|------|------------|-----|
| -----   | -----      | --- | ---- | -----      | --- |
| RC4-SHA | 0x00, 0x05 | RSA | RSA  | RC4 (128)  |     |
| SHA1    |            |     |      |            |     |

The fields above are :

```
{Tenable ciphertype}
{Cipher ID code}
Kex={key exchange}
Auth={authentication}
Encrypt={symmetric encryption method}
MAC={message authentication code}
{export flag}
```

## 104743 (2) - TLS Version 1.0 Protocol Detection

### Synopsis

The remote service encrypts traffic using an older version of TLS.

### Description

The remote service accepts connections encrypted using TLS 1.0. TLS 1.0 has a number of cryptographic design flaws. Modern implementations of TLS 1.0 mitigate these problems, but newer versions of TLS like 1.2 and 1.3 are designed against these flaws and should be used whenever possible.

As of March 31, 2020, Endpoints that aren't enabled for TLS 1.2 and higher will no longer function properly with major web browsers and major vendors.

PCI DSS v3.2 requires that TLS 1.0 be disabled entirely by June 30, 2018, except for POS POI terminals (and the SSL/TLS termination points to which they connect) that can be verified as not being susceptible to any known exploits.

### See Also

<https://tools.ietf.org/html/draft-ietf-tls-oldversions-deprecate-00>

### Solution

Enable support for TLS 1.2 and 1.3, and disable support for TLS 1.0.

### Risk Factor

Medium

### CVSS v3.0 Base Score

## Plugin Output

10.10.10.10 (tcp/80/www)

To disable these methods, add the following lines for each virtual host in your configuration file :

```
RewriteEngine on
RewriteCond %{REQUEST_METHOD} ^(TRACE|TRACK)
RewriteRule .* - [F]
```

Alternatively, note that Apache versions 1.3.34, 2.0.55, and 2.2 support disabling the TRACE method natively via the 'TraceEnable' directive.

## 12217 (1) - DNS Server Cache Snooping Remote Information Disclosure

### Synopsis

The remote DNS server is vulnerable to cache snooping attacks.

### Description

The remote DNS server responds to queries for third-party domains that do not have the recursion bit set.

This may allow a remote attacker to determine which domains have recently been resolved via this name server, and therefore which hosts have been recently visited.

For instance, if an attacker was interested in whether your company utilizes the online services of a particular financial institution, they would be able to use this attack to build a statistical model regarding company usage of that financial institution. Of course, the attack can also be used to find B2B partners, web-surfing patterns, external mail servers, and more.

Note: If this is an internal DNS server not accessible to outside networks, attacks would be limited to the internal network. This may include employees, consultants and potentially users on a guest network or WiFi connection if supported.

### See Also

[http://cs.unc.edu/~fabian/course\\_papers/cache\\_snooping.pdf](http://cs.unc.edu/~fabian/course_papers/cache_snooping.pdf)

### Solution

Contact the vendor of the DNS software for a fix.

### Risk Factor

Medium

### CVSS v3.0 Base Score

## 31705 (1) - SSL Anonymous Cipher Suites Supported

### Synopsis

The remote service supports the use of anonymous SSL ciphers.

### Description

The remote host supports the use of anonymous SSL ciphers. While this enables an administrator to set up a service that encrypts traffic without having to generate and configure SSL certificates, it offers no way to verify the remote host's identity and renders the service vulnerable to a man-in-the-middle attack.

Note: This is considerably easier to exploit if the attacker is on the same physical network.

### See Also

## 33447 (1) - Multiple Vendor DNS Query ID Field Prediction Cache Poisoning

### Synopsis

The remote name resolver (or the server it uses upstream) is affected by a DNS cache poisoning vulnerability.

### Description

The remote DNS resolver does not use random ports when making queries to third-party DNS servers. An unauthenticated, remote attacker can exploit this to poison the remote DNS server, allowing the attacker to divert legitimate traffic to arbitrary sites.

### See Also

| 124. <b>Summary</b>    | 124.0 |
| 125. <b>Conclusion</b> | 125.0 |

The remote host is running a Telnet server over an unencrypted channel.

Using Telnet over an unencrypted channel is not recommended as logins, passwords, and commands are transferred in cleartext. This allows a remote, man-in-the-middle attacker to eavesdrop on a Telnet session to obtain credentials or other sensitive information and to modify traffic exchanged between a client and server.

SSH is preferred over Telnet since it protects credentials from eavesdropping and can tunnel additional data streams such as an X11 session.

**Solution**

Disable the Telnet service and use SSH instead.

| Risk Factor                        | Impact   | Control  |
|------------------------------------|--|--|
| 1. Lack of industry connections    | Reduced opportunities for partnerships and collaborations                        | Actively seek out and build relationships with industry leaders and potential partners               |
| 2. Limited marketing budget        | Reduced visibility and awareness of the startup                                  | Implement cost-effective marketing strategies, such as social media and content marketing            |
| 3. Limited product differentiation | Increased competition and lower profit margins                                   | Conduct thorough market research to identify unique value propositions and differentiate the product |
| 4. Limited customer base           | Reduced revenue and potential for growth   | Implement targeted marketing campaigns and offer incentives to attract and retain customers          |
| 5. Limited financial resources     | Reduced ability to invest in research and development, marketing, and operations | Seek out external funding sources, such as venture capitalists and angel investors                   |

## 52611 (1) - SMTP Service STARTTLS Plaintext Command Injection

### Synopsis

The remote mail service allows plaintext command injection while negotiating an encrypted communications channel.

### Description

The remote SMTP service contains a software flaw in its STARTTLS implementation that could allow a remote, unauthenticated attacker to inject commands during the plaintext protocol phase that will be executed during the ciphertext protocol phase.

Successful exploitation could allow an attacker to steal a victim's email or associated SASL (Simple Authentication and Security Layer) credentials.

```

```
220 2.0.0 Ready to start TLS
```

```
250 2.0.0 Ok
```

## 57608 (1) - SMB Signing not required

### Synopsis

Signing is not required on the remote SMB server.

### Description

Signing is not required on the remote SMB server. An unauthenticated, remote attacker can exploit this to conduct man-in-the-middle attacks against the SMB server.

### See Also

<http://www.nessus.org/u?df39b8b3>

<http://technet.microsoft.com/en-us/library/cc731957.aspx>

<https://www.samba.org/samba/docs/current/man-html/smb.conf.5.html>

<http://www.nessus.org/u?a3cac4ea>

### Solution

Enforce message signing in the host's configuration. On Windows, this is found in the policy setting 'Microsoft network server: Digitally sign communications (always)'. On Samba, the setting is called 'server signing'. See the 'see also' links for further details.

10.10.10.10 (tcp/445/cifs)

## 81606 (1) - SSL/TLS EXPORT\_RSA <= 512-bit Cipher Suites Supported (FREAK)

### Synopsis

The remote host supports a set of weak ciphers.

### Description

The remote host supports EXPORT\_RSA cipher suites with keys less than or equal to 512 bits. An attacker can factor a 512-bit RSA modulus in a short amount of time.

A man-in-the-middle attacker may be able to downgrade the session to use EXPORT\_RSA cipher suites (e.g. CVE-2015-0204). Thus, it is recommended to remove support for weak cipher suites.

## 89058 (1) - SSL DROWN Attack Vulnerability (Decrypting RSA with Obsolete and Weakened eNcryption)

### Synopsis

The remote host may be affected by a vulnerability that allows a remote attacker to potentially decrypt captured TLS traffic.

### Description

The remote host supports SSLv2 and therefore may be affected by a vulnerability that allows a cross-protocol Bleichenbacher padding oracle attack known as DROWN (Decrypting RSA with Obsolete and Weakened eNcryption). This vulnerability exists due to a flaw in the Secure Sockets Layer Version 2 (SSLv2) implementation, and it allows captured TLS traffic to be decrypted. A man-in-the-middle attacker can exploit this to decrypt the TLS connection by utilizing previously captured traffic and weak cryptography along with a series of specially crafted connections to an SSLv2 server that uses the same private key.

### See Also

<https://drownattack.com/>

<https://drownattack.com/drown-attack-paper.pdf>

### Solution

Disable SSLv2 and export grade cryptography cipher suites. Ensure that private keys are not used anywhere with server software that supports SSLv2 connections.

Encrypt={symmetric encryption method}  
MAC={message authentication code}  
{export flag}

## 90317 (1) - SSH Weak Algorithms Supported

### Synopsis

The remote SSH server is configured to allow weak encryption algorithms or no algorithm at all.

### Description

Nessus has detected that the remote SSH server is configured to use the Arcfour stream cipher or no cipher at all. RFC 4253 advises against using Arcfour due to an issue with weak keys.

### See Also

<https://tools.ietf.org/html/rfc4253#section-6.3>

### Solution

Contact the vendor or consult product documentation to remove the weak ciphers.

```
arcfour
arcfour128
arcfour256
```

The following weak client-to-server encryption algorithms are supported :

```
arcfour
arcfour128
arcfour256
```

## 136808 (1) - ISC BIND Denial of Service

### Synopsis

The remote name server is affected by an assertion failure vulnerability.

### Description

A denial of service (DoS) vulnerability exists in ISC BIND versions 9.11.18 / 9.11.18-S1 / 9.12.4-P2 / 9.13 / 9.14.11 / 9.15 / 9.16.2 / 9.17 / 9.17.1 and earlier. An unauthenticated, remote attacker can exploit this issue, via a specially-crafted message, to cause the service to stop responding.

Note that Nessus has not tested for this issue but has instead relied only on the application's self-reported version number.

### See Also

<https://kb.isc.org/docs/cve-2020-8617>

### Solution

Upgrade to the patched release most closely related to your current version of BIND.

## 139915 (1) - ISC BIND 9.x < 9.11.22, 9.12.x < 9.16.6, 9.17.x < 9.17.4 DoS

### Synopsis

The remote name server is affected by a denial of service vulnerability.

### Description

According to its self-reported version number, the installation of ISC BIND running on the remote name server is version 9.x prior to 9.11.22, 9.12.x prior to 9.16.6 or 9.17.x prior to 9.17.4. It is, therefore, affected by a denial of service (DoS) vulnerability due to an assertion failure when attempting to verify a truncated response to a TSIG-signed request. An authenticated, remote attacker can exploit this issue by sending a truncated response to a TSIG-signed request to trigger an assertion failure, causing the server to exit.

Note that Nessus has not tested for this issue but has instead relied only on the application's self-reported version number.

### See Also

<https://kb.isc.org/docs/cve-2020-8622>

### Solution

Upgrade to BIND 9.11.22, 9.16.6, 9.17.4 or later.

### Risk Factor

```

## 78479 (2) - SSLv3 Padding Oracle On Downgraded Legacy Encryption Vulnerability (POODLE)

### Synopsis

It is possible to obtain sensitive information from the remote host with SSL/TLS-enabled services.

### Description

The remote host is affected by a man-in-the-middle (MitM) information disclosure vulnerability known as POODLE. The vulnerability is due to the way SSL 3.0 handles padding bytes when decrypting messages encrypted using block ciphers in cipher block chaining (CBC) mode.

MitM attackers can decrypt a selected byte of a cipher text in as few as 256 tries if they are able to force a victim application to repeatedly send the same data over newly created SSL 3.0 connections.

As long as a client and service both support SSLv3, a connection can be 'rolled back' to SSLv3, even if TLSv1 or newer is supported by the client and service.

The TLS Fallback SCSV mechanism prevents 'version rollback' attacks without impacting legacy clients; however, it can only protect connections when the client and service support the mechanism. Sites that cannot disable SSLv3 immediately should enable this mechanism.

This is a vulnerability in the SSLv3 specification, not in any particular SSL implementation. Disabling SSLv3 is the only way to completely mitigate the vulnerability.

### See Also

<https://www.imperialviolet.org/2014/10/14/poodle.html>

<https://www.openssl.org/~bodo/ssl-poodle.pdf>

<https://tools.ietf.org/html/draft-ietf-tls-downgrade-scsv-00>

### Solution

Disable SSLv3.

Services that must support SSLv3 should enable the TLS Fallback SCSV mechanism until SSLv3 can be disabled.

### Risk Factor

Medium

### CVSS v3.0 Base Score

3.4 (CVSS:3.0/AV:N/AC:H/PR:N/UI:R/S:C/C:L/I:N/A:N)

## Plugin Output

---

### 10.10.10.10 (tcp/25/smtp)

Nessus determined that the remote server supports SSLv3 with at least one CBC cipher suite, indicating that this server is vulnerable.

It appears that TLSv1 or newer is supported on the server. However, the Fallback SCSV mechanism is not supported, allowing connections to be "rolled back" to SSLv3.

### 10.10.10.10 (tcp/5432/postgresql)

Nessus determined that the remote server supports SSLv3 with at least one CBC cipher suite, indicating that this server is vulnerable.

It appears that TLSv1 or newer is supported on the server. However, the Fallback SCSV mechanism is not supported, allowing connections to be "rolled back" to SSLv3.

## 10114 (1) - ICMP Timestamp Request Remote Date Disclosure

### Synopsis

It is possible to determine the exact time set on the remote host.

### Description

The remote host answers to an ICMP timestamp request. This allows an attacker to know the date that is set on the targeted machine, which may assist an unauthenticated, remote attacker in defeating time-based authentication protocols.

Timestamps returned from machines running Windows Vista / 7 / 2008 / 2008 R2 are deliberately incorrect, but usually within 1000 seconds of the actual system time.

### Solution

Filter out the ICMP timestamp requests (13), and the outgoing ICMP timestamp replies (14).

### Risk Factor

Low

### VPR Score

4.2

### CVSS v2.0 Base Score

2.1 (CVSS2#AV:L/AC:L/Au:N/C:P/I:N/A:N)

### References

CVE CVE-1999-0524

XREF CWE:200

### Plugin Information

Published: 1999/08/01, Modified: 2024/05/03

### Plugin Output

10.10.10.10 (icmp/0)

```
The difference between the local and remote clocks is -17503 seconds.
```

## 10407 (1) - X Server Detection

### Synopsis

An X11 server is listening on the remote host

### Description

The remote host is running an X11 server. X11 is a client-server protocol that can be used to display graphical applications running on a given host on a remote client.

Since the X11 traffic is not ciphered, it is possible for an attacker to eavesdrop on the connection.

### Solution

Restrict access to this port. If the X11 client/server facility is not used, disable TCP support in X11 entirely (-nolisten tcp).

### Risk Factor

Low

### CVSS v2.0 Base Score

2.6 (CVSS2#AV:N/AC:H/Au:N/C:P/I:N/A:N)

### Plugin Information

Published: 2000/05/12, Modified: 2019/03/05

### Plugin Output

10.10.10.10 (tcp/6000/x11)

```
X11 Version : 11.0
```

## 70658 (1) - SSH Server CBC Mode Ciphers Enabled

### Synopsis

The SSH server is configured to use Cipher Block Chaining.

### Description

The SSH server is configured to support Cipher Block Chaining (CBC) encryption. This may allow an attacker to recover the plaintext message from the ciphertext.

Note that this plugin only checks for the options of the SSH server and does not check for vulnerable software versions.

### Solution

Contact the vendor or consult product documentation to disable CBC mode cipher encryption, and enable CTR or GCM cipher mode encryption.

### Risk Factor

Low

### CVSS v3.0 Base Score

3.7 (CVSS:3.0/AV:N/AC:H/PR:N/UI:N/S:U/C:L/I:N/A:N)

### VPR Score

3.6

### CVSS v2.0 Base Score

2.6 (CVSS2#AV:N/AC:H/Au:N/C:P/I:N/A:N)

### CVSS v2.0 Temporal Score

1.9 (CVSS2#E:U/RL:OF/RC:C)

### Plugin Information

## Plugin Output

---

### 10.10.10.10 (tcp/22/ssh)

The following client-to-server Cipher Block Chaining (CBC) algorithms are supported :

```
3des-cbc
aes128-cbc
aes192-cbc
aes256-cbc
blowfish-cbc
cast128-cbc
rijndael-cbc@lysator.liu.se
```

The following server-to-client Cipher Block Chaining (CBC) algorithms are supported :

```
3des-cbc
aes128-cbc
aes192-cbc
aes256-cbc
blowfish-cbc
cast128-cbc
rijndael-cbc@lysator.liu.se
```

## 71049 (1) - SSH Weak MAC Algorithms Enabled

### Synopsis

The remote SSH server is configured to allow MD5 and 96-bit MAC algorithms.

### Description

The remote SSH server is configured to allow either MD5 or 96-bit MAC algorithms, both of which are considered weak.

Note that this plugin only checks for the options of the SSH server, and it does not check for vulnerable software versions.

### Solution

Contact the vendor or consult product documentation to disable MD5 and 96-bit MAC algorithms.

### Risk Factor

Low

### CVSS v2.0 Base Score

2.6 (CVSS2#AV:N/AC:H/Au:N/C:P/I:N/A:N)

### Plugin Information

Published: 2013/11/22, Modified: 2016/12/14

### Plugin Output

10.10.10.10 (tcp/22/ssh)

```
The following client-to-server Message Authentication Code (MAC) algorithms
are supported :
```

```
  hmac-md5
  hmac-md5-96
  hmac-sha1-96
```

```
The following server-to-client Message Authentication Code (MAC) algorithms
are supported :
```

```
  hmac-md5
  hmac-md5-96
  hmac-sha1-96
```

## 83738 (1) - SSL/TLS EXPORT\_DHE <= 512-bit Export Cipher Suites Supported (Logjam)

### Synopsis

The remote host supports a set of weak ciphers.

### Description

The remote host supports EXPORT\_DHE cipher suites with keys less than or equal to 512 bits. Through cryptanalysis, a third party can find the shared secret in a short amount of time.

A man-in-the middle attacker may be able to downgrade the session to use EXPORT\_DHE cipher suites. Thus, it is recommended to remove support for weak cipher suites.

### See Also

<https://weakdh.org/>

### Solution

Reconfigure the service to remove support for EXPORT\_DHE cipher suites.

### Risk Factor

Low

EXPORT\_DHE cipher suites supported by the remote server :

Low Strength Ciphers (<= 64-bit key)

| Name                                   | Code       | KEX     | Auth | Encryption  | MAC |
|--|------------|---------|------|-------------|-----|
| EXP-EDH-RSA-DES-CBC-SHA<br>SHA1 export | 0x00, 0x14 | DH(512) | RSA  | DES-CBC(40) |     |
| EXP-ADH-DES-CBC-SHA<br>SHA1 export     | 0x00, 0x19 | DH(512) | None | DES-CBC(40) |     |
| EXP-ADH-RC4-MD5<br>export              | 0x00, 0x17 | DH(512) | None | RC4(40)     | MD5 |

The fields above are :

{Tenable ciphername}  
{Cipher ID code}  
Kex={key exchange}  
Auth={authentication}  
Encrypt={symmetric encryption method}  
MAC={message authentication code}  
{export flag}

## 83875 (1) - SSL/TLS Diffie-Hellman Modulus <= 1024 Bits (Logjam)

### Synopsis

The remote host allows SSL/TLS connections with one or more Diffie-Hellman moduli less than or equal to 1024 bits.

### Description

The remote host allows SSL/TLS connections with one or more Diffie-Hellman moduli less than or equal to 1024 bits. Through cryptanalysis, a third party may be able to find the shared secret in a short amount of time (depending on modulus size and attacker resources). This may allow an attacker to recover the plaintext or potentially violate the integrity of connections.

### See Also

<https://weakdh.org/>

### Solution

Reconfigure the service to use a unique Diffie-Hellman moduli of 2048 bits or greater.

### Risk Factor

Low

### 10.10.10.10 (tcp/25/smtp)

Vulnerable connection combinations :

```
SSL/TLS version  : SSLv3  
Cipher suite     : TLS1_CK_DHE_RSA_EXPORT_WITH_DES40_CBC_SHA  
Diffie-Hellman MODP size (bits) : 512  
Logjam attack difficulty : Easy (could be carried out by individuals)
```

```
SSL/TLS version  : TLSv1.0  
Cipher suite     : TLS1_CK_DHE_RSA_EXPORT_WITH_DES40_CBC_SHA  
Diffie-Hellman MODP size (bits) : 512  
Logjam attack difficulty : Easy (could be carried out by individuals)
```

## 153953 (1) - SSH Weak Key Exchange Algorithms Enabled

### Synopsis

The remote SSH server is configured to allow weak key exchange algorithms.

### Description

The remote SSH server is configured to allow key exchange algorithms which are considered weak.

This is based on the IETF draft document Key Exchange (KEX) Method Updates and Recommendations for Secure Shell (SSH) RFC9142. Section 4 lists guidance on key exchange algorithms that SHOULD NOT and MUST NOT be enabled. This includes:

diffie-hellman-group-exchange-sha1

diffie-hellman-group1-sha1

gss-gex-sha1-\*

gss-group1-sha1-\*

gss-group14-sha1-\*

rsa1024-sha1

Note that this plugin only checks for the options of the SSH server, and it does not check for vulnerable software versions.

### See Also

<https://datatracker.ietf.org/doc/html/rfc9142>

### Solution

Contact the vendor or consult product documentation to disable the weak algorithms.

### Risk Factor

Low

### CVSS v3.0 Base Score

3.7 (CVSS:3.0/AV:N/AC:H/PR:N/UI:N/S:U/C:L/I:N/A:N)

### Plugin Information

## Plugin Output

---

10.10.10.10 (tcp/22/ssh)

The following weak key exchange algorithms are enabled :

```
diffie-hellman-group-exchange-sha1
diffie-hellman-group1-sha1
```

## 11219 (25) - Nessus SYN scanner

### Synopsis

It is possible to determine which TCP ports are open.

### Description

This plugin is a SYN 'half-open' port scanner. It shall be reasonably quick even against a firewalled target.

Note that SYN scans are less intrusive than TCP (full connect) scans against broken services, but they might cause problems for less robust firewalls and also leave unclosed connections on the remote target, if the network is loaded.

### Solution

Protect your target with an IP filter.

### Risk Factor

None

### Plugin Information

```

10.10.10.10 (tcp/1524/wild\_shell)

A shell server (Metasploitable) is running on this port.

10.10.10.10 (tcp/2121/ftp)

An FTP server is running on this port.

10.10.10.10 (tcp/5900/vnc)

A vnc server is running on this port.

## 10092 (2) - FTP Server Detection

### Synopsis

An FTP server is listening on a remote port.

### Description

It is possible to obtain the banner of the remote FTP server by connecting to a remote port.

### Solution

n/a

### Risk Factor

None

### References

XREF IAVT:0001-T-0030

XREF IAVT:0001-T-0943

### Plugin Information

Published: 1999/10/12, Modified: 2023/08/17

### Plugin Output

10.10.10.10 (tcp/21/ftp)

```
The remote FTP banner is :
```

```
220 (vsFTPD 2.3.4)
```

10.10.10.10 (tcp/2121/ftp)

```
The remote FTP banner is :
```

```
220 ProFTPD 1.3.1 Server (Debian) [::ffff:10.10.10.10]
```

## 10863 (2) - SSL Certificate Information

### Synopsis

This plugin displays the SSL certificate.

### Description

This plugin connects to every SSL-related port and attempts to extract and dump the X.509 certificate.

### Solution

n/a

### Risk Factor

None

### Plugin Information

Published: 2008/05/19, Modified: 2021/02/03

### Plugin Output

10.10.10.10 (tcp/25/smtp)

```

## 11002 (2) - DNS Server Detection

### Synopsis

A DNS server is listening on the remote host.

### Description

The remote service is a Domain Name System (DNS) server, which provides a mapping between hostnames and IP addresses.

### See Also

[https://en.wikipedia.org/wiki/Domain\\_Name\\_System](https://en.wikipedia.org/wiki/Domain_Name_System)

### Solution

Disable this service if it is not needed or restrict access to internal hosts only if the service is available externally.

### Risk Factor

None

### Plugin Information

Published: 2003/02/13, Modified: 2017/05/16

### Plugin Output

10.10.10.10 (tcp/53/dns)  
10.10.10.10 (udp/53/dns)

## 11011 (2) - Microsoft Windows SMB Service Detection

### Synopsis

A file / print sharing service is listening on the remote host.

### Description

The remote service understands the CIFS (Common Internet File System) or Server Message Block (SMB) protocol, used to provide shared access to files, printers, etc between nodes on a network.

### Solution

n/a

### Risk Factor

None

### Plugin Information

Published: 2002/06/05, Modified: 2021/02/11

### Plugin Output

10.10.10.10 (tcp/139/smb)

```
An SMB server is running on this port.
```

10.10.10.10 (tcp/445/cifs)

```
A CIFS server is running on this port.
```

## 11154 (2) - Unknown Service Detection: Banner Retrieval

### Synopsis

There is an unknown service running on the remote host.

### Description

Nessus was unable to identify a service on the remote host even though it returned a banner of some type.

### Solution

n/a

### Risk Factor

None

### Plugin Information

Published: 2002/11/18, Modified: 2022/07/26

### Plugin Output

#### 10.10.10.10 (tcp/512)

If you know what this service is and think the banner could be used to identify it, please send a description of the service along with the following output to [svc-signatures@nessus.org](mailto:svc-signatures@nessus.org) :

```
Port    : 512
Type    : spontaneous
Banner  :
0x00:  01 57 68 65 72 65 20 61 72 65 20 79 6F 75 3F 0A    .Where are you?.
      0x10:
```

#### 10.10.10.10 (tcp/8787)

If you know what this service is and think the banner could be used to identify it, please send a description of the service along with the following output to [svc-signatures@nessus.org](mailto:svc-signatures@nessus.org) :

```
Port    : 8787
Type    : get_http

## 21643 (2) - SSL Cipher Suites Supported

### Synopsis

The remote service encrypts communications using SSL.

### Description

This plugin detects which SSL ciphers are supported by the remote service for encrypting communications.

### See Also

<https://www.openssl.org/docs/man1.0.2/man1/ciphers.html>

<http://www.nessus.org/u?e17ffcd>

### Solution

n/a

### Risk Factor

None

### Plugin Information

Published: 2006/06/05, Modified: 2023/07/10

### Plugin Output

10.10.10.10 (tcp/25/smtp)

Here is the list of SSL ciphers supported by the remote server :  
Each group is reported per SSL Version.

SSL Version : TLSv1

Low Strength Ciphers (<= 64-bit key)

| Name                                   | Code       | KEX       | Auth | Encryption   | MAC |
|--|------------|-----------|------|--------------|-----|
| EXP-EDH-RSA-DES-CBC-SHA<br>SHA1 export | 0x00, 0x14 | DH (512)  | RSA  | DES-CBC (40) |     |

## 22227 (2) - RMI Registry Detection

### Synopsis

An RMI registry is listening on the remote host.

### Description

The remote host is running an RMI registry, which acts as a bootstrap naming service for registering and retrieving remote objects with simple names in the Java Remote Method Invocation (RMI) system.

### See Also

<https://docs.oracle.com/javase/1.5.0/docs/guide/rmi/spec/rmiTOC.html>

```

## 45410 (2) - SSL Certificate 'commonName' Mismatch

### Synopsis

The 'commonName' (CN) attribute in the SSL certificate does not match the hostname.

### Description

The service running on the remote host presents an SSL certificate for which the 'commonName' (CN) attribute does not match the hostname on which the service listens.

### Solution

If the machine has several names, make sure that users connect to the service through the DNS hostname that matches the common name in the certificate.

### Risk Factor

None

### Plugin Information

Published: 2010/04/03, Modified: 2021/03/09

### Plugin Output

10.10.10.10 (tcp/25/smtp)

The host name known by Nessus is :

metasploitable

The Common Name in the certificate is :

ubuntu804-base.localdomain

10.10.10.10 (tcp/5432/postgresql)

The host name known by Nessus is :

metasploitable

The Common Name in the certificate is :

ubuntu804-base.localdomain

## 50845 (2) - OpenSSL Detection

### Synopsis

The remote service appears to use OpenSSL to encrypt traffic.

### Description

Based on its response to a TLS request with a specially crafted server name extension, it seems that the remote service is using the OpenSSL library to encrypt traffic.

Note that this plugin can only detect OpenSSL implementations that have enabled support for TLS extensions (RFC 4366).

### Risk Factor

None

### Plugin Information

Published: 2010/11/30, Modified: 2020/06/12

### Plugin Output

10.10.10.10 (tcp/25/smtp)  
10.10.10.10 (tcp/5432/postgresql)

## 56984 (2) - SSL / TLS Versions Supported

### Synopsis

The remote service encrypts communications.

### Description

This plugin detects which SSL and TLS versions are supported by the remote service for encrypting communications.

### Solution

n/a

### Risk Factor

None

### Plugin Information

Published: 2011/12/01, Modified: 2023/07/10

### Plugin Output

10.10.10.10 (tcp/25/smtp)

```
This port supports SSLv2/SSLv3/TLSv1.0.
```

10.10.10.10 (tcp/5432/postgresql)

```
This port supports SSLv3/TLSv1.0.
```

## 57041 (2) - SSL Perfect Forward Secrecy Cipher Suites Supported

### Synopsis

The remote service supports the use of SSL Perfect Forward Secrecy ciphers, which maintain confidentiality even if the key is stolen.

### Description

The remote host supports the use of SSL ciphers that offer Perfect Forward Secrecy (PFS) encryption. These cipher suites ensure that recorded SSL traffic cannot be broken at a future date if the server's private key is compromised.

supported by the target :
```

```
DEFLATE (0x01)
```

10.10.10.10 (tcp/5432/postgresql)

```
Nessus was able to confirm that the following compression method is
supported by the target :
```

```
DEFLATE (0x01)
```

## 70544 (2) - SSL Cipher Block Chaining Cipher Suites Supported

### Synopsis

The remote service supports the use of SSL Cipher Block Chaining ciphers, which combine previous blocks with subsequent ones.

### Description

The remote host supports the use of SSL ciphers that operate in Cipher Block Chaining (CBC) mode. These cipher suites offer additional security over Electronic Codebook (ECB) mode, but have the potential to leak information if used improperly.

```

## 156899 (2) - SSL/TLS Recommended Cipher Suites

### Synopsis

The remote host advertises discouraged SSL/TLS ciphers.

### Description

The remote host has open SSL/TLS ports which advertise discouraged cipher suites. It is recommended to only enable support for the following cipher suites:

TLSv1.3:

- 0x13,0x01 TLS13\_AES\_128\_GCM\_SHA256
- 0x13,0x02 TLS13\_AES\_256\_GCM\_SHA384
- 0x13,0x03 TLS13\_CHACHA20\_POLY1305\_SHA256

TLSv1.2:

- 0xC0,0x2B ECDHE-ECDSA-AES128-GCM-SHA256
- 0xC0,0x2F ECDHE-RSA-AES128-GCM-SHA256
- 0xC0,0x2C ECDHE-ECDSA-AES256-GCM-SHA384
- 0xC0,0x30 ECDHE-RSA-AES256-GCM-SHA384
- 0xCC,0xA9 ECDHE-ECDSA-CHACHA20-POLY1305
- 0xCC,0xA8 ECDHE-RSA-CHACHA20-POLY1305

This is the recommended configuration for the vast majority of services, as it is highly secure and compatible with nearly every client released in the last five (or more) years.

{Cipher ID code}
Kex={key exchange}
Auth={authentication}
Encrypt={symmetric encryption method}
MAC={message authentication code}
{export flag}
```

## 10028 (1) - DNS Server BIND version Directive Remote Version Detection

### Synopsis

It is possible to obtain the version number of the remote DNS server.

### Description

The remote host is running BIND or another DNS server that reports its version number when it receives a special request for the text 'version.bind' in the domain 'chaos'.

This version is not necessarily accurate and could even be forged, as some DNS servers send the information based on a configuration file.

### Solution

It is possible to hide the version number of BIND by using the 'version' directive in the 'options' section in named.conf.

### Risk Factor

None

### References

XREF IAVT:0001-T-0583

### Plugin Information

Published: 1999/10/12, Modified: 2022/10/12

### Plugin Output

10.10.10.10 (udp/53/dns)

```
Version : 9.4.2
```

## 10107 (1) - HTTP Server Type and Version

### Synopsis

A web server is running on the remote host.

### Description

This plugin attempts to determine the type and the version of the remote web server.

### Solution

n/a

### Risk Factor

None

### References

XREF IAVT:0001-T-0931

### Plugin Information

Published: 2000/01/04, Modified: 2020/10/30

### Plugin Output

10.10.10.10 (tcp/80/www)

```
The remote web server type is :
```

```
Apache/2.2.8 (Ubuntu) DAV/2
```

## 10150 (1) - Windows NetBIOS / SMB Remote Host Information Disclosure

### Synopsis

It was possible to obtain the network name of the remote host.

### Description

The remote host is listening on UDP port 137 or TCP port 445, and replies to NetBIOS nbtscan or SMB requests.

Note that this plugin gathers information to be used in other plugins, but does not itself generate a report.

### Solution

n/a

### Risk Factor

None

### Plugin Information

Published: 1999/10/12, Modified: 2021/02/10

### Plugin Output

10.10.10.10 (udp/137/netbios-ns)

The following 7 NetBIOS names have been gathered :

|                |                             |
|----------------|-----------------------------|
| METASPLOITABLE | = Computer name             |
| METASPLOITABLE | = Messenger Service         |
| METASPLOITABLE | = File Server Service       |
| __MSBROWSE__   | = Master Browser            |
| WORKGROUP      | = Workgroup / Domain name   |
| WORKGROUP      | = Master Browser            |
| WORKGROUP      | = Browser Service Elections |

This SMB server seems to be a Samba server - its MAC address is NULL.

## 10223 (1) - RPC portmapper Service Detection

### Synopsis

An ONC RPC portmapper is running on the remote host.

### Description

The RPC portmapper is running on this port.

The portmapper allows someone to get the port number of each RPC service running on the remote host by sending either multiple lookup requests or a DUMP request.

### Solution

n/a

### Risk Factor

None

### CVSS v3.0 Base Score

0.0 (CVSS:3.0/AV:N/AC:L/PR:N/UI:N/S:U/C:N/I:N/A:N)

### CVSS v2.0 Base Score

### References

CVE CVE-1999-0632

### Plugin Information

Published: 1999/08/19, Modified: 2019/10/04

### Plugin Output

10.10.10.10 (udp/111/rpc-portmapper)

## 10263 (1) - SMTP Server Detection

### Synopsis

An SMTP server is listening on the remote port.

### Description

The remote host is running a mail (SMTP) server on this port.

Since SMTP servers are the targets of spammers, it is recommended you disable it if you do not use it.

### Solution

Disable this service if you do not use it, or filter incoming traffic to this port.

### Risk Factor

None

### References

XREF IAVT:0001-T-0932

### Plugin Information

Published: 1999/10/12, Modified: 2020/09/22

### Plugin Output

10.10.10.10 (tcp/25/smtp)

Remote SMTP server banner :

220 metasploitable.localdomain ESMTP Postfix (Ubuntu)

## 10267 (1) - SSH Server Type and Version Information

### Synopsis

An SSH server is listening on this port.

### Description

It is possible to obtain information about the remote SSH server by sending an empty authentication request.

### Solution

n/a

### Risk Factor

None

### References

XREF IAVT:0001-T-0933

### Plugin Information

Published: 1999/10/12, Modified: 2020/09/22

### Plugin Output

10.10.10.10 (tcp/22/ssh)

```
SSH version : SSH-2.0-OpenSSH_4.7p1 Debian-8ubuntu1
SSH supported authentication : publickey,password
```

## 10281 (1) - Telnet Server Detection

## Synopsis

A Telnet server is listening on the remote port.

| Description     | Frequency | Severity | Impact | Mitigation           |
|-----------------|-----------|----------|--------|----------------------|
| Data Breach     | Low       | Medium   | High   | Implement encryption |
| System Downtime | Medium    | Low      | Medium | Regular backups      |
| Security Audit  | High      | Low      | Low    | Annual review        |
| Compliance      | Medium    | Medium   | Medium | Regular updates      |

The remote host is running a Telnet server, a remote terminal server.

**Solution**

Disable this service if you do not use it.

| Risk Factor                                      | Impact | Control |

## 10287 (1) - Traceroute Information

### Synopsis

It was possible to obtain traceroute information.

### Description

Makes a traceroute to the remote host.

### Solution

n/a

### Risk Factor

None

### Plugin Information

Published: 1999/11/27, Modified: 2023/12/04

### Plugin Output

10.10.10.10 (udp/0)

```
For your information, here is the traceroute from 10.10.10.11 to 10.10.10.10 :
10.10.10.11
10.10.10.10

Hop Count: 1
```

## 10342 (1) - VNC Software Detection

### Synopsis

The remote host is running a remote display software (VNC).

### Description

The remote host is running VNC (Virtual Network Computing), which uses the RFB (Remote Framebuffer) protocol to provide remote access to graphical user interfaces and thus permits a console on the remote host to be displayed on another.

### See Also

<https://en.wikipedia.org/wiki/Vnc>

### Solution

Make sure use of this software is done in accordance with your organization's security policy and filter incoming traffic to this port.

### Risk Factor

None

### Plugin Information

Published: 2000/03/07, Modified: 2017/06/12

### Plugin Output

10.10.10.10 (tcp/5900/vnc)

```
The highest RFB protocol version supported by the server is :
```

```
3.3
```

## 10397 (1) - Microsoft Windows SMB LanMan Pipe Server Listing Disclosure

### Synopsis

It is possible to obtain network information.

### Description

It was possible to obtain the browse list of the remote Windows system by sending a request to the LANMAN pipe. The browse list is the list of the nearest Windows systems of the remote host.

### Solution

n/a

### Risk Factor

None

### Plugin Information

Published: 2000/05/09, Modified: 2022/02/01

### Plugin Output

10.10.10.10 (tcp/445/cifs)

```
Here is the browse list of the remote host :
```

```
METASPLOITABLE ( os : 0.0 )
```

## 10437 (1) - NFS Share Export List

### Synopsis

The remote NFS server exports a list of shares.

### Description

This plugin retrieves the list of NFS exported shares.

### See Also

<http://www.tldp.org/HOWTO/NFS-HOWTO/security.html>

### Solution

Ensure each share is intended to be exported.

### Risk Factor

None

### Plugin Information

Published: 2000/06/07, Modified: 2019/10/04

### Plugin Output

10.10.10.10 (tcp/2049/rpc-nfs)

```
Here is the export list of 10.10.10.10 :
```

```
/ *
```

## 10719 (1) - MySQL Server Detection

### Synopsis

A database server is listening on the remote port.

### Description

The remote host is running MySQL, an open source database server.

### Solution

n/a

### Risk Factor

None

### References

XREF IAVT:0001-T-0802

### Plugin Information

Published: 2001/08/13, Modified: 2022/10/12

### Plugin Output

10.10.10.10 (tcp/3306/mysql)

```
Version : 5.0.51a-3ubuntu5
Protocol : 10
Server Status : SERVER_STATUS_AUTOCOMMIT
Server Capabilities :
  CLIENT_LONG_FLAG (Get all column flags)
  CLIENT_CONNECT_WITH_DB (One can specify db on connect)
  CLIENT_COMPRESS (Can use compression protocol)
  CLIENT_PROTOCOL_41 (New 4.1 protocol)
  CLIENT_SSL (Switch to SSL after handshake)
  CLIENT_TRANSACTIONS (Client knows about transactions)
  CLIENT_SECURE_CONNECTION (New 4.1 authentication)
```

## 10785 (1) - Microsoft Windows SMB NativeLanManager Remote System Information Disclosure

### Synopsis

It was possible to obtain information about the remote operating system.

### Description

Nessus was able to obtain the remote operating system name and version (Windows and/or Samba) by sending an authentication request to port 139 or 445. Note that this plugin requires SMB to be enabled on the host.

### Solution

n/a

### Risk Factor

None

### Plugin Information

Published: 2001/10/17, Modified: 2021/09/20

### Plugin Output

10.10.10.10 (tcp/445/cifs)

```
The remote Operating System is : Unix
The remote native LAN manager is : Samba 3.0.20-Debian
The remote SMB Domain Name is : METASPLOITABLE
```

## 10881 (1) - SSH Protocol Versions Supported

### Synopsis

A SSH server is running on the remote host.

### Description

This plugin determines the versions of the SSH protocol supported by the remote SSH daemon.

### Solution

n/a

### Risk Factor

None

### Plugin Information

Published: 2002/03/06, Modified: 2021/01/19

### Plugin Output

10.10.10.10 (tcp/22/ssh)

```
The remote SSH daemon supports the following versions of the
SSH protocol :
```

- 1.99
- 2.0

## 11153 (1) - Service Detection (HELP Request)

### Synopsis

The remote service could be identified.

### Description

It was possible to identify the remote service by its banner or by looking at the error message it sends when it receives a 'HELP' request.

### Solution

n/a

### Risk Factor

None

### Plugin Information

Published: 2002/11/18, Modified: 2018/11/26

### Plugin Output

10.10.10.10 (tcp/3306/mysql)

```
A MySQL server is running on this port.
```

## 11156 (1) - IRC Daemon Version Detection

### Synopsis

The remote host is an IRC server.

### Description

This plugin determines the version of the IRC daemon.

### Solution

n/a

### Risk Factor

None

### Plugin Information

Published: 2002/11/19, Modified: 2016/01/08

### Plugin Output

10.10.10.10 (tcp/6667/irc)

```
The IRC server version is : Unreal3.2.8.1. FhiXOoE [*=2309]
```

## 11424 (1) - WebDAV Detection

### Synopsis

The remote server is running with WebDAV enabled.

### Description

WebDAV is an industry standard extension to the HTTP specification.

It adds a capability for authorized users to remotely add and manage the content of a web server.

If you do not use this extension, you should disable it.

### Solution

<http://support.microsoft.com/default.aspx?kbid=241520>

### Risk Factor

None

### Plugin Information

Published: 2003/03/20, Modified: 2011/03/14

### Plugin Output

10.10.10.10 (tcp/80/www)

## 11819 (1) - TFTP Daemon Detection

### Synopsis

A TFTP server is listening on the remote port.

### Description

The remote host is running a TFTP (Trivial File Transfer Protocol) daemon. TFTP is often used by routers and diskless hosts to retrieve their configuration. It can also be used by worms to propagate.

### Solution

Disable this service if you do not use it.

### Risk Factor

None

### Plugin Information

Published: 2003/08/13, Modified: 2022/12/28

### Plugin Output

10.10.10.10 (udp/69/tftp)

## 11936 (1) - OS Identification

### Synopsis

It is possible to guess the remote operating system.

### Description

Using a combination of remote probes (e.g., TCP/IP, SMB, HTTP, NTP, SNMP, etc.), it is possible to guess the name of the remote operating system in use. It is also possible sometimes to guess the version of the operating system.

### Solution

n/a

### Risk Factor

None

### Plugin Information

Published: 2003/12/09, Modified: 2023/11/08

### Plugin Output

10.10.10.10 (tcp/0)

```
Remote operating system : Linux Kernel 2.6 on Ubuntu 8.04 (gutsy)
Confidence level : 95
Method : HTTP
```

Not all fingerprints could give a match. If you think some or all of the following could be used to identify the host's operating system, please email them to [os-signatures@nessus.org](mailto:os-signatures@nessus.org). Be sure to include a brief description of the host itself, such as the actual operating system or product / model names.

```
SSH:SSH-2.0-OpenSSH_4.7p1 Debian-8ubuntu1
```

```
SinFP:

ed093088706603bfd5dc237399b498da2d4d31c6
```

The remote host is running Linux Kernel 2.6 on Ubuntu 8.04 (gutsy)

## 17975 (1) - Service Detection (GET request)

### Synopsis

The remote service could be identified.

### Description

It was possible to identify the remote service by its banner or by looking at the error message it sends when it receives an HTTP request.

### Solution

n/a

### Risk Factor

None

### References

XREF IAVT:0001-T-0935

### Plugin Information

Published: 2005/04/06, Modified: 2021/10/27

### Plugin Output

10.10.10.10 (tcp/6667/irc)

```
An IRC daemon is listening on this port.
```

## 18261 (1) - Apache Banner Linux Distribution Disclosure

### Synopsis

The name of the Linux distribution running on the remote host was found in the banner of the web server.

### Description

Nessus was able to extract the banner of the Apache web server and determine which Linux distribution the remote host is running.

### Solution

If you do not wish to display this information, edit 'httpd.conf' and set the directive 'ServerTokens Prod' and restart Apache.

### Risk Factor

None

### Plugin Information

Published: 2005/05/15, Modified: 2022/03/21

### Plugin Output

10.10.10.10 (tcp/0)

```
The Linux distribution detected was :  
- Ubuntu 8.04 (gutsy)
```

## 19288 (1) - VNC Server Security Type Detection

### Synopsis

A VNC server is running on the remote host.

### Description

This script checks the remote VNC server protocol version and the available 'security types'.

### Solution

n/a

### Risk Factor

None

### Plugin Information

Published: 2005/07/22, Modified: 2021/07/13

### Plugin Output

10.10.10.10 (tcp/5900/vnc)

```
\n\nThe remote VNC server chose security type #2 (VNC authentication)
```

## 19506 (1) - Nessus Scan Information

### Synopsis

This plugin displays information about the Nessus scan.

### Description

This plugin displays, for each tested host, information about the scan itself :

- The version of the plugin set.
- The type of scanner (Nessus or Nessus Home).
- The version of the Nessus Engine.
- The port scanner(s) used.
- The port range scanned.
- The ping round trip time
- Whether credentialed or third-party patch management checks are possible.
- Whether the display of superseded patches is enabled
- The date of the scan.
- The duration of the scan.
- The number of hosts scanned in parallel.
- The number of checks done in parallel.

### Solution

n/a

### Risk Factor

None

### Plugin Information

Published: 2005/08/26, Modified: 2024/03/13

### Plugin Output

10.10.10.10 (tcp/0)

Information about this scan :

```
Nessus version : 10.7.2
Nessus build : 20029
Plugin feed version : 202405110848
Scanner edition used : Nessus
Scanner OS : LINUX
Scanner distribution : ubuntu1404-x86-64
Scan type : Normal
```

```
Scan name : Skanowanie Podatno#>ci Metasploitable -12.05.24
Scan policy used : Basic Network Scan
Scanner IP : 10.10.10.11
Port scanner(s) : nessus_syn_scanner
Port range : default
Ping RTT : 135.530 ms
Thorough tests : no
Experimental tests : no
Plugin debugging enabled : no
Paranoia level : 1
Report verbosity : 1
Safe checks : yes
Optimize the test : no
Credentialed checks : no
Patch management checks : None
Display superseded patches : yes (supersedence plugin did not launch)
CGI scanning : disabled
Web application tests : disabled
Max hosts : 30
Max checks : 4
Recv timeout : 5
Backports : Detected
Allow post-scan editing : Yes
Nessus Plugin Signature Checking : Enabled
Audit File Signature Checking : Disabled
Scan Start Date : 2024/5/12 9:59 EDT
Scan duration : 594 sec
Scan for malware : no
```

## 24260 (1) - HyperText Transfer Protocol (HTTP) Information

### Synopsis

Some information about the remote HTTP configuration can be extracted.

### Description

This test gives some information about the remote HTTP protocol - the version used, whether HTTP Keep-Alive is enabled, etc...

This test is informational only and does not denote any security problem.

### Solution

n/a

### Risk Factor

None

### Plugin Information

Published: 2007/01/30, Modified: 2024/02/26

### Plugin Output

10.10.10.10 (tcp/80/www)

Response Code : HTTP/1.1 200 OK

Protocol version : HTTP/1.1

HTTP/2 TLS Support: No

HTTP/2 Cleartext Support: No

SSL : no

Keep-Alive : yes

Options allowed : (Not implemented)

Headers :

Date: Sat, 11 May 2024 18:55:59 GMT

## 25220 (1) - TCP/IP Timestamps Supported

### Synopsis

The remote service implements TCP timestamps.

### Description

The remote host implements TCP timestamps, as defined by RFC1323. A side effect of this feature is that the uptime of the remote host can sometimes be computed.

### See Also

<http://www.ietf.org/rfc/rfc1323.txt>

### Solution

n/a

### Risk Factor

None

### Plugin Information

Published: 2007/05/16, Modified: 2023/10/17

### Plugin Output

10.10.10.10 (tcp/0)

## 25240 (1) - Samba Server Detection

### Synopsis

An SMB server is running on the remote host.

### Description

The remote host is running Samba, a CIFS/SMB server for Linux and Unix.

### See Also

<https://www.samba.org/>

### Solution

n/a

### Risk Factor

None

### Plugin Information

Published: 2007/05/16, Modified: 2022/10/12

### Plugin Output

10.10.10.10 (tcp/445/cifs)

## 26024 (1) - PostgreSQL Server Detection

### Synopsis

A database service is listening on the remote host.

### Description

The remote service is a PostgreSQL database server, or a derivative such as EnterpriseDB.

### See Also

<https://www.postgresql.org/>

### Solution

Limit incoming traffic to this port if desired.

### Risk Factor

None

### Plugin Information

Published: 2007/09/14, Modified: 2023/05/24

### Plugin Output

10.10.10.10 (tcp/5432/postgresql)

## 35371 (1) - DNS Server hostname.bind Map Hostname Disclosure

### Synopsis

The DNS server discloses the remote host name.

### Description

It is possible to learn the remote host name by querying the remote DNS server for 'hostname.bind' in the CHAOS domain.

### Solution

It may be possible to disable this feature. Consult the vendor's documentation for more information.

### Risk Factor

None

### Plugin Information

Published: 2009/01/15, Modified: 2011/09/14

### Plugin Output

10.10.10.10 (udp/53/dns)

```
The remote host name is :  
metasploitable
```

## 35373 (1) - DNS Server DNSSEC Aware Resolver

### Synopsis

The remote DNS resolver is DNSSEC-aware.

### Description

The remote DNS resolver accepts DNSSEC options. This means that it may verify the authenticity of DNSSEC protected zones if it is configured to trust their keys.

### Solution

n/a

### Risk Factor

None

### Plugin Information

Published: 2009/01/15, Modified: 2013/11/21

### Plugin Output

10.10.10.10 (udp/53/dns)

## 35716 (1) - Ethernet Card Manufacturer Detection

### Synopsis

The manufacturer can be identified from the Ethernet OUI.

### Description

Each ethernet MAC address starts with a 24-bit Organizationally Unique Identifier (OUI). These OUIs are registered by IEEE.

### See Also

<http://www.nessus.org/u?794673b4>

### Solution

n/a

### Risk Factor

None

### Plugin Information

Published: 2009/02/19, Modified: 2020/05/13

### Plugin Output

10.10.10.10 (tcp/0)

The following card manufacturers were identified :

08:00:27:BD:87:FF : PCS Systemtechnik GmbH

## 39519 (1) - Backported Security Patch Detection (FTP)

### Synopsis

Security patches are backported.

### Description

Security patches may have been 'backported' to the remote FTP server without changing its version number.

Banner-based checks have been disabled to avoid false positives.

Note that this test is informational only and does not denote any security problem.

### See Also

[https://access.redhat.com/security/updates/backporting/?sc\\_cid=3093](https://access.redhat.com/security/updates/backporting/?sc_cid=3093)

### Solution

n/a

### Risk Factor

None

### Plugin Information

Published: 2009/06/25, Modified: 2015/07/07

### Plugin Output

10.10.10.10 (tcp/2121/ftp)

Give Nessus credentials to perform local checks.

## 39520 (1) - Backported Security Patch Detection (SSH)

### Synopsis

Security patches are backported.

### Description

Security patches may have been 'backported' to the remote SSH server without changing its version number.

Banner-based checks have been disabled to avoid false positives.

Note that this test is informational only and does not denote any security problem.

### See Also

[https://access.redhat.com/security/updates/backporting/?sc\\_cid=3093](https://access.redhat.com/security/updates/backporting/?sc_cid=3093)

### Solution

n/a

### Risk Factor

None

### Plugin Information

Published: 2009/06/25, Modified: 2015/07/07

### Plugin Output

10.10.10.10 (tcp/22/ssh)

Give Nessus credentials to perform local checks.

## 39521 (1) - Backported Security Patch Detection (WWW)

### Synopsis

Security patches are backported.

### Description

Security patches may have been 'backported' to the remote HTTP server without changing its version number.

Banner-based checks have been disabled to avoid false positives.

Note that this test is informational only and does not denote any security problem.

### See Also

[https://access.redhat.com/security/updates/backporting/?sc\\_cid=3093](https://access.redhat.com/security/updates/backporting/?sc_cid=3093)

### Solution

n/a

### Risk Factor

None

### Plugin Information

Published: 2009/06/25, Modified: 2015/07/07

### Plugin Output

10.10.10.10 (tcp/80/www)

Give Nessus credentials to perform local checks.

## 42088 (1) - SMTP Service STARTTLS Command Support

### Synopsis

The remote mail service supports encrypting traffic.

### Description

The remote SMTP service supports the use of the 'STARTTLS' command to switch from a cleartext to an encrypted communications channel.

### See Also

<https://en.wikipedia.org/wiki/STARTTLS>

<https://tools.ietf.org/html/rfc2487>

### Solution

n/a

### Risk Factor

None

### Plugin Information

Published: 2009/10/09, Modified: 2019/03/20

### Plugin Output

10.10.10.10 (tcp/25/smtp)

```
Here is the SMTP service's SSL certificate that Nessus was able to
collect after sending a 'STARTTLS' command :
```

## 45590 (1) - Common Platform Enumeration (CPE)

### Synopsis

It was possible to enumerate CPE names that matched on the remote system.

### Description

By using information obtained from a Nessus scan, this plugin reports CPE (Common Platform Enumeration) matches for various hardware and software products found on a host.

Note that if an official CPE is not available for the product, this plugin computes the best possible CPE based on the information available from the scan.

### See Also

## 48243 (1) - PHP Version Detection

### Synopsis

It was possible to obtain the version number of the remote PHP installation.

### Description

Nessus was able to determine the version of PHP available on the remote web server.

### Solution

n/a

### Risk Factor

None

### References

XREF IAVT:0001-T-0936

### Plugin Information

Published: 2010/08/04, Modified: 2022/10/12

### Plugin Output

10.10.10.10 (tcp/80/www)

Nessus was able to identify the following PHP version information :

Version : 5.2.4-2ubuntu5.10  
Source : X-Powered-By: PHP/5.2.4-2ubuntu5.10

## 51891 (1) - SSL Session Resume Supported

### Synopsis

The remote host allows resuming SSL sessions.

### Description

This script detects whether a host allows resuming SSL sessions by performing a full SSL handshake to receive a session ID, and then reconnecting with the previously used session ID. If the server accepts the session ID in the second connection, the server maintains a cache of sessions that can be resumed.

### Solution

n/a

### Risk Factor

None

### Plugin Information

Published: 2011/02/07, Modified: 2021/09/13

### Plugin Output

10.10.10.10 (tcp/25/smtp)

```
This port supports resuming SSLv3 sessions.
```

## 52703 (1) - vsftpd Detection

### Synopsis

An FTP server is listening on the remote port.

### Description

The remote host is running vsftpd, an FTP server for UNIX-like systems written in C.

### See Also

## 53335 (1) - RPC portmapper (TCP)

### Synopsis

An ONC RPC portmapper is running on the remote host.

### Description

The RPC portmapper is running on this port.

The portmapper allows someone to get the port number of each RPC service running on the remote host by sending either multiple lookup requests or a DUMP request.

### Solution

n/a

### Risk Factor

None

### Plugin Information

Published: 2011/04/08, Modified: 2011/08/29

### Plugin Output

10.10.10.10 (tcp/111/rpc-portmapper)

## 54615 (1) - Device Type

### Synopsis

It is possible to guess the remote device type.

### Description

Based on the remote operating system, it is possible to determine what the remote system type is (eg: a printer, router, general-purpose computer, etc).

### Solution

n/a

### Risk Factor

None

### Plugin Information

Published: 2011/05/23, Modified: 2022/09/09

### Plugin Output

10.10.10.10 (tcp/0)

Remote device type : general-purpose  
Confidence level : 95

## 65792 (1) - VNC Server Unencrypted Communication Detection

### Synopsis

A VNC server with one or more unencrypted 'security-types' is running on the remote host.

### Description

This script checks the remote VNC server protocol version and the available 'security types' to determine if any unencrypted 'security-types' are in use or available.

### Solution

n/a

### Risk Factor

None

### Plugin Information

Published: 2013/04/03, Modified: 2014/03/12

### Plugin Output

10.10.10.10 (tcp/5900/vnc)

The remote VNC server supports the following security type  
which does not perform full data communication encryption :

2 (VNC authentication)

## 66334 (1) - Patch Report

### Synopsis

The remote host is missing several patches.

### Description

The remote host is missing one or more security patches. This plugin lists the newest version of each patch to install to make sure the remote host is up-to-date.

Note: Because the 'Show missing patches that have been superseded' setting in your scan policy depends on this plugin, it will always run and cannot be disabled.

### Solution

Install the patches listed below.

### Risk Factor

None

### Plugin Information

Published: 2013/07/08, Modified: 2024/04/09

### Plugin Output

10.10.10.10 (tcp/0)

. You need to take the following 2 actions :

[ ISC BIND 9.x < 9.11.22, 9.12.x < 9.16.6, 9.17.x < 9.17.4 DoS (139915) ]

+ Action to take : Upgrade to BIND 9.11.22, 9.16.6, 9.17.4 or later.

+Impact : Taking this action will resolve 3 different vulnerabilities (CVEs).

[ Samba Badlock Vulnerability (90509) ]

+ Action to take : Upgrade to Samba version 4.2.11 / 4.3.8 / 4.4.2 or later.

## 70657 (1) - SSH Algorithms and Languages Supported

### Synopsis

An SSH server is listening on this port.

### Description

This script detects which algorithms and languages are supported by the remote service for encrypting communications.

### Solution

n/a

### Risk Factor

None

### Plugin Information

Published: 2013/10/28, Modified: 2017/08/28

### Plugin Output

10.10.10.10 (tcp/22/ssh)

```
Nessus negotiated the following encryption algorithm with the server :
```

```
The server supports the following options for kex_algorithms :
```

```
diffie-hellman-group-exchange-sha1
diffie-hellman-group-exchange-sha256
diffie-hellman-group1-sha1
diffie-hellman-group14-sha1
```

```
The server supports the following options for server_host_key_algorithms :
```

```
ssh-dss
ssh-rsa
```

```
The server supports the following options for encryption_algorithms_client_to_server :
```

```
3des-cbc
aes128-cbc
aes128-ctr
aes192-cbc
aes192-ctr
aes256-cbc
aes256-ctr
arcfour
arcfour128
arcfour256
blowfish-cbc
cast128-cbc
```

```
rijndael-cbc@lysator.liu.se
```

The server supports the following options for `encryption_algorithms_server_to_client` :

```
3des-cbc
aes128-cbc
aes128-ctr
aes192-cbc
aes192-ctr
aes256-cbc
aes256-ctr
arcfour
arcfour128
arcfour256
blowfish-cbc
cast128-cbc
rijndael-cbc@lysator.liu.se
```

The server supports the following options for `mac_algorithms_client_to_server` :

```
hmac-md5
hmac-md5-96
hmac-ripemd160
hmac-ripemd160@openssh.com
hmac-sha1
hmac-sha1-96
umac-64@openssh.com
```

The server supports the following options for `mac_algorithms_server_to_client` :

```
hmac-md5
hmac-md5-96
hmac-ripemd160
hmac-ripemd160@openssh.com
hmac-sha1
hmac-sha1-96
umac-64@openssh.com
```

The server supports the following options for `compression_algorithms_client_to_server` :

```
none
zlib@openssh.com
```

The server supports the following options for `compression_algorithms_server_to_client` :

```
none
zlib@openssh.com
```

## 84574 (1) - Backported Security Patch Detection (PHP)

### Synopsis

Security patches have been backported.

### Description

Security patches may have been 'backported' to the remote PHP install without changing its version number.

Banner-based checks have been disabled to avoid false positives.

Note that this test is informational only and does not denote any security problem.

### See Also

[https://access.redhat.com/security/updates/backporting/?sc\\_cid=3093](https://access.redhat.com/security/updates/backporting/?sc_cid=3093)

### Solution

n/a

### Risk Factor

None

### Plugin Information

Published: 2015/07/07, Modified: 2022/04/11

### Plugin Output

10.10.10.10 (tcp/80/www)

Give Nessus credentials to perform local checks.

## 86420 (1) - Ethernet MAC Addresses

### Synopsis

This plugin gathers MAC addresses from various sources and consolidates them into a list.

### Description

This plugin gathers MAC addresses discovered from both remote probing of the host (e.g. SNMP and Netbios) and from running local checks (e.g. ifconfig). It then consolidates the MAC addresses into a single, unique, and uniform list.

### Solution

n/a

### Risk Factor

None

### Plugin Information

Published: 2015/10/16, Modified: 2020/05/13

### Plugin Output

10.10.10.10 (tcp/0)

```
The following is a consolidated list of detected MAC addresses:  
- 08:00:27:BD:87:FF
```

## 96982 (1) - Server Message Block (SMB) Protocol Version 1 Enabled (uncredentialed check)

### Synopsis

The remote Windows host supports the SMBv1 protocol.

### Description

The remote Windows host supports Server Message Block Protocol version 1 (SMBv1). Microsoft recommends that users discontinue the use of SMBv1 due to the lack of security features that were included in later SMB versions. Additionally, the Shadow Brokers group reportedly has an exploit that affects SMB; however, it is unknown if the exploit affects SMBv1 or another version. In response to this, US-CERT recommends that users disable SMBv1 per SMB best practices to mitigate these potential issues.

### See Also

<https://blogs.technet.microsoft.com/filecab/2016/09/16/stop-using-smb1/>

<https://support.microsoft.com/en-us/help/2696547/how-to-detect-enable-and-disable-smbv1-smbv2-and-smbv3-in-windows-and>

<http://www.nessus.org/u?8dcab5e4>

<http://www.nessus.org/u?234f8ef8>

<http://www.nessus.org/u?4c7e0cf3>

### Solution

Disable SMBv1 according to the vendor instructions in Microsoft KB2696547. Additionally, block SMB directly by blocking TCP port 445 on all network boundary devices. For SMB over the NetBIOS API, block TCP ports 137 / 139 and UDP ports 137 / 138 on all network boundary devices.

### Risk Factor

None

### References

XREF IAVT:0001-T-0710

### Plugin Information

Published: 2017/02/03, Modified: 2020/09/22

### Plugin Output

10.10.10.10 (tcp/445/cifs)

The remote host supports SMBv1.

## 100871 (1) - Microsoft Windows SMB Versions Supported (remote check)

### Synopsis

It was possible to obtain information about the version of SMB running on the remote host.

### Description

Nessus was able to obtain the version of SMB running on the remote host by sending an authentication request to port 139 or 445.

Note that this plugin is a remote check and does not work on agents.

### Solution

n/a

### Risk Factor

None

### Plugin Information

Published: 2017/06/19, Modified: 2019/11/22

### Plugin Output

10.10.10.10 (tcp/445/cifs)

```
The remote host supports the following versions of SMB :
SMBv1
```

## 104887 (1) - Samba Version

### Synopsis

It was possible to obtain the samba version from the remote operating system.

### Description

Nessus was able to obtain the samba version from the remote operating by sending an authentication request to port 139 or 445. Note that this plugin requires SMB1 to be enabled on the host.

### Solution

n/a

### Risk Factor

None

### Plugin Information

Published: 2017/11/30, Modified: 2019/11/22

### Plugin Output

10.10.10.10 (tcp/445/cifs)

```
The remote Samba Version is : Samba 3.0.20-Debian
```

## 106716 (1) - Microsoft Windows SMB2 and SMB3 Dialects Supported (remote check)

### Synopsis

It was possible to obtain information about the dialects of SMB2 and SMB3 available on the remote host.

### Description

Nessus was able to obtain the set of SMB2 and SMB3 dialects running on the remote host by sending an authentication request to port 139 or 445.

### Solution

n/a

### Risk Factor

None

### Plugin Information

Published: 2018/02/09, Modified: 2020/03/11

### Plugin Output

10.10.10.10 (tcp/445/cifs)

```
The remote host does NOT support the following SMB dialects :
_version_  _introduced in windows version_
2.0.2      Windows 2008
2.1        Windows 7
2.2.2      Windows 8 Beta
2.2.4      Windows 8 Beta
3.0        Windows 8
3.0.2      Windows 8.1
3.1        Windows 10
3.1.1      Windows 10
```

## 110723 (1) - Target Credential Status by Authentication Protocol - No Credentials Provided

### Synopsis

Nessus was able to find common ports used for local checks, however, no credentials were provided in the scan policy.

### Description

Nessus was not able to successfully authenticate directly to the remote target on an available authentication protocol. Nessus was able to connect to the remote port and identify that the service running on the port supports an authentication protocol, but Nessus failed to authenticate to the remote service using the provided credentials. There may have been a protocol failure that prevented authentication from being attempted or all of the provided credentials for the authentication protocol may be invalid. See plugin output for error details.

Please note the following :

- This plugin reports per protocol, so it is possible for valid credentials to be provided for one protocol and not another. For example, authentication may succeed via SSH but fail via SMB, while no credentials were provided for an available SNMP service.
- Providing valid credentials for all available authentication protocols may improve scan coverage, but the value of successful authentication for a given protocol may vary from target to target depending upon what data (if any) is gathered from the target via that protocol. For example, successful authentication via SSH is more valuable for Linux targets than for Windows targets, and likewise successful authentication via SMB is more valuable for Windows targets than for Linux targets.

### Solution

n/a

### Risk Factor

None

### References

XREF IAVB:0001-B-0504

### Plugin Information

Published: 2018/06/27, Modified: 2024/04/19

### Plugin Output

10.10.10.10 (tcp/0)

SSH was detected on port 22 but no credentials were provided.

SSH local checks were not enabled.

## 117886 (1) - OS Security Patch Assessment Not Available

### Synopsis

OS Security Patch Assessment is not available.

### Description

OS Security Patch Assessment is not available on the remote host.

This does not necessarily indicate a problem with the scan.

Credentials may not have been provided, OS security patch assessment may not be supported for the target, the target may not have been identified, or another issue may have occurred that prevented OS security patch assessment from being available. See plugin output for details.

This plugin reports non-failure information impacting the availability of OS Security Patch Assessment. Failure information is reported by plugin 21745 : 'OS Security Patch Assessment failed'. If a target host is not supported for OS Security Patch Assessment, plugin 110695 : 'OS Security Patch Assessment Checks Not Supported' will report concurrently with this plugin.

### Solution

n/a

### Risk Factor

None

10.10.10.10 (tcp/0)

The following issues were reported :

```
- Plugin      : no_local_checks_credentials.nasl
  Plugin ID   : 110723
  Plugin Name : Target Credential Status by Authentication Protocol - No Credentials Provided
  Message     :
  Credentials were not provided for detected SSH service.
```

## 118224 (1) - PostgreSQL STARTTLS Support

### Synopsis

The remote service supports encrypting traffic.

### Description

The remote PostgreSQL server supports the use of encryption initiated during pre-login to switch from a cleartext to an encrypted communications channel.

### See Also

<https://www.postgresql.org/docs/9.2/protocol-flow.html#AEN96066>

## 135860 (1) - WMI Not Available

### Synopsis

WMI queries could not be made against the remote host.

### Description

WMI (Windows Management Instrumentation) is not available on the remote host over DCOM. WMI queries are used to gather information about the remote host, such as its current state, network interface configuration, etc.

Without this information Nessus may not be able to identify installed software or security vulnerabilities that exist on the remote host.

```

## 149334 (1) - SSH Password Authentication Accepted

### Synopsis

The SSH server on the remote host accepts password authentication.

### Description

The SSH server on the remote host accepts password authentication.

### See Also

<https://tools.ietf.org/html/rfc4252#section-8>

### Solution

n/a

### Risk Factor

None

### Plugin Information

Published: 2021/05/07, Modified: 2021/05/07

### Plugin Output

10.10.10.10 (tcp/22/ssh)

## 153588 (1) - SSH SHA-1 HMAC Algorithms Enabled

### Synopsis

The remote SSH server is configured to enable SHA-1 HMAC algorithms.

### Description

The remote SSH server is configured to enable SHA-1 HMAC algorithms.

Although NIST has formally deprecated use of SHA-1 for digital signatures, SHA-1 is still considered secure for HMAC as the security of HMAC does not rely on the underlying hash function being resistant to collisions.

Note that this plugin only checks for the options of the remote SSH server.

### Solution

n/a

### Risk Factor

None

### Plugin Information

Published: 2021/09/23, Modified: 2022/04/05

### Plugin Output
